

ROYAL SOCIETY THE

HIBANIANI

Founded 1876

LIBRARY REGULATIONS

(a) Books, periodicals and pamphlets may be borrowed by Fellows, Members, Licentiate Members, Associates and Affiliates personally or by a messenger producing a written order. The person to whom such publications are delivered shall sign a

receipt for them in a book provided for that purpose.

(b) Publications may be borrowed through the post upon a written order. An acknowledgement of the receipt of such publications must be made on the form provided and returned to the Society immediately. Failing this, it will be assumed that the borrower has received the books, for which he will accordingly be held responsible. The postage of publications returned to the Society shall be defrayed by the borrower.

(c) A borrower may not have more than three publications

in his possession at one time.

(d) A borrower will be considered liable for the value of any publication lost or damaged while on loan to him, and, if it be a single volume or part of a set, for the value of the whole work thereby rendered imperfect. Marking or writing in the publications is not permitted, and borrowers are requested to

call attention to damage of this character.

(e) Books and pamphlets may be retained for twenty-eight days. Periodicals may be retained for fourteen days. Applications for extension of the loan period must be made in writing before its expiry. This loan period cannot be extended without application being made to the Secretary of the Society whose decision in this matter must be accepted as final and binding.

(f) Books and pamphlets added to the Library will not be lent until after the expiry of one month from the date received.

The current number of a periodical may not be borrowed.

(g) Borrowers retaining publications longer than the time specified, and neglecting to return them when demanded, forfeit the right to borrow until they be returned, and for such further time as may be ordered by the Council.

Any borrower failing to comply with a request for the return of a publication shall be considered liable for the cost of replacing it, and the Council, may, after giving due notice to

him, order it to be replaced at his expense.

No publication may be reissued to the same borrower until at least seven days have elapsed after its return, neither may it be transferred by one borrower to another.

(h) Publications may not be taken or sent out of the United Kingdom.

(i) Publications returned through the post must be securely packed and adequately protected.

(j) Parcels should be addressed: THE LIBRARIAN,

REPORT

ON THE

VITAL STATISTICS of SCOTLAND for the YEAR 1960

GENERAL REGISTRY OFFICE OF BIRTHS, &c.,
NEW REGISTER HOUSE,
EDINBURGH, 19th December, 1961.

SIR,

I have the honour, in compliance with the Registration of Births, Deaths and Marriages (Scotland) Act, 1854, to submit, with a view to its being laid before Parliament, a Report on the Vital Statistics of Scotland for the year 1960.

I am, Sir,

Your obedient Servant,

ALEX. B. TAYLOR,

Registrar-General.

To The Right Honourable

JOHN S. MACLAY, c.m.g., m.p.,

Secretary of State for Scotland.

Introduction

Population. The estimated population of Scotland at 30th June, 1960, was 5,208,000 and was 16,300 more than in the previous year. The natural increase (excess of births over deaths) during the period was 39,700, but the effect of this on the population was reduced to the figure of 16,300 referred to by a net outward movement of the population.

Births. The births registered in Scotland during the year 1960 numbered 101,292, giving a rate of 19.45 per thousand of population. This rate is 0.33 above the 1959 rate and 0.66 above the average.

Marriages. 40,101 marriages were registered, 341 fewer than in 1959. The rate of 7.70 per thousand of the population is 0.5 below the average.

Deaths. 61,764 deaths were registered and the rate per thousand of the population was 11.86, 0.29 less than the rate for 1959.

Infant Mortality. Deaths of children under one year of age numbered 2,673 and equal a rate of 26.4 per 1,000 live births, the lowest ever recorded in Scotland.

Maternal Mortality. Deaths from diseases and accidents of pregnancy and childbirth numbered 35, one fewer than in 1959. This represented a rate of 3 for every 10,000 births (live and still), the lowest ever recorded in Scotland.

Expectation of Life. The expectation of life at birth on the experience of the mortality of 1960 is 66.4 years for males and 71.9 for females.

Explanatory Notes

Lay-out of this Report

The lay-out of this Report has been altered with a view to easier reference to the various sections. The general text has been divided into chapters and each paragraph has been numbered. Four of the previous appendices have been incorporated in the main Report and the chapter number of each is shown in the Table of Contents under the heading "Appendices".

Text Tables have also been given numbers appropriate to the chapters in which they are included.

New Tables

The following new Tables have been included in this Report:

- 28A Deaths of infants under one week by social classification, age of mother and number of previous children, Scotland 1960.
- 28B Deaths of infants under four weeks by social classification, age of mother and number of previous children, Scotland 1960
- 29A Deaths and death-rates per 1,000 live births by cause and sex under one year of age, 1950-1960

Definitions

Stillbirth. A child which has issued forth from its mother after the 28th week of pregnancy which did not breathe or show any other sign of life.

Perinatal mortality, in this report, includes stillbirths and deaths in the first week of life.

Neonatal mortality, includes deaths in the first four weeksof life.

Postneonatal mortality, includes deaths after the first four weeks but before the end of the first year.

Infant mortality, includes all deaths in the first year of life.

Social Class. Social classes are assigned according to the occupation of the father as stated at birth registration in accordance with the Classification of Occupations*.

Social Class I: Professional etc. occupations

Social Class II: Intermediate occupations

Social Class III: Skilled occupations

Social Class IV: Partly-skilled occupations

Social Class V: Unskilled

^{*}General Register Office: Classification of Occupations, 1960. London, 1960.

General Notes

- (1) To save repetition, any references to an average or average rate will, unless the contrary is indicated, be intended as references to the average for the five years 1955 to 1959.
- (2) The home or de facto population is used for the calculation of the birth, death and marriage-rates.
- (3) Births, stillbirths and deaths are corrected throughout this Report by transfer where necessary to usual place of residence, if in Scotland, but marriage figures are as registered.
- (4) Throughout the Report "year" means "calendar year" except where otherwise specified.

Report 1960

Chapter 1. Estimated Population

1.1 The estimated population of Scotland at 30th June, 1960 was 5,208,000, and was 16,300 more than in the previous year.

1.2 Since 1951 these estimates have been based upon the figures obtained at the census in that year, adjusted to take account of the natural increase (excess of births over deaths) and such information as is available about movement into and out of Scotland. This movement comprises emigration and immigration in the ordinary sense of these terms, movements of workers on civil engineering projects and admission to, discharge from, and movement of H.M. Forces, these

factors operating differently at different times.

1.3 The natural increase in the year to 30th June, 1960 was 39,700 compared with 36,400 in 1959. As in every year since 1951, the estimated numbers moving out of Scotland, whether for purposes of emigration in the ordinary sense or otherwise, have been in excess of the estimated numbers moving in. In the year to 30th June, 1960, the estimated net outward movement was 23,400, thus reducing the effect of the natural increase to the increase of 16,300 given above. Of those who migrated it is estimated that there were net losses of 18,600 to the rest of the United Kingdom and 8,700 overseas. In 1959 the estimated net outward movement, emigration and otherwise (13,800) reduced the effect of the natural increase to 22,700.

- 1.4 Table 1, as in previous Reports, gives the estimated mid-year population in 1960. Since 1951 the estimated population has been the "home" or "de facto" population, comprising the population of all types actually in Scotland, and thus including all armed forces in Scotland whether or not of Scottish domicile but excluding members of H.M. Forces of Scottish domicile serving outwith Scotland and the Merchant Navy abroad. The "home" population has been used since 1951 as a basis for calculating the birth, death and marriage rates in these Reports.
- 1.5 It is sometimes also convenient to have estimates of the "civilian" population (all armed forces and merchant navy at home and abroad being excluded); and the "total" population (i.e. the "home" population, members of H.M. Forces of Scottish domicile serving out of Scotland and of the Merchant Navy abroad, but excluding Forces stationed in Scotland who are not of Scottish domicile). Table 1A shows these additional population figures along with the "home" population, analysing all three by age and sex. Table 1B analyses the "total" population by age, sex and marital condition.

1.6 Changes in the age structure of the population over a period are of interest. Table 1.1 below shows the age distribution according to three age groups at different dates since 1861. It will be noted that the proportion of the total population aged 65 and over has more than doubled between 1901 and 1951; and that it has been rising since then, being in 1960 2.2 times the proportion in 1901.

1.7 Table 1c shows a projection of the total population of Scotland by sex and age at five-yearly intervals from 1960 to 1980. This projection has been prepared by the Government Actuary's Department in consultation with the Registrar-General.

1.8 A distinctive feature of the population of Scotland is its distribution—a much higher number living in urban than rural areas and in cities than in large burghs. The Central Clydesdale Conurbation (defined on page 72) occupying just over one per cent. of the area of Scotland has a population about one-third of the total population of Scotland.

Table 1.1

Age Distribution of the Population of Scotland, 1861-1960

Year	Proportion per 1,000 of total population in each age-group					
	0–14	15-64	Over 65			
1861 Census	361	591	49			
1901 ,,	334	617	48			
1951 ,,	246	654	99			
1952 Estimate	247	652	100			
1953 ,,	247	651	101			
1954 ,,	248	650	102			
1955 ,,	249	649	102			
1956 ,,	250	647	102			
1957 ,,	252	645	103			
1958 ,,	253	643	104			
1959 ,,	254	642	104			
1960 ,,	256	640	104			

1.9 Studies of long term trends can be appropriately made only in the Census Reports, but Table 1.2 shows something of the apparent trends since 1951.

1.10 Since 1951 the small burghs have taken first place as gainers of population and the large burghs second place. In the four counties of cities there has been a slight decrease in population since 1951. In the landward areas of counties the population has fluctuated, the total number in 1960 being a little above the total number in 1951.

Table 1.2 Census Population 1951 and Estimated Populations 1952-60, Scotland by Local Authority Districts and Central Clydeside Conurbation

Year	Scotland	Counties of Cities	Large Burghs	Small Burghs	Landward	Central Clydeside Conurbation
1951	5,096,415	1,926,903	828,389	817,623	1,523,500	1,762,053
1952	5,114,624	1,923,584	836,054	838,130	1,516,856	1,761,113
1953	5,117,612	1,917,506	839,844	840,198	1,520,064	1,762,437
1954	5,123,336	1,915,223	844,214	842,333	1,521,566	1,765,414
1955	5,133,292	1,914,652	848,644	844,925	1,525,071	1,770,340
1956	5,144,578	1,913,486	855,019	848,290	1,527,783	1,777,589
1957	5,150,020	1,910,450	860,430	850,745	1,528,395	1,782,170
1958	5,168,992	1,912,884	867,844	867,691	1,520,573	1,790,658
1959	5,191,660	1,913,678	875,023	874,938	1,528,021	1,798,464
1960	5,208,000	1,910,189	880,831	881,194	1,535,786	1,802,466

1.11 The ratio of the population in the Central Clydeside Conurbation to the population in the rest of Scotland has not changed very much since 1951. Both have increased but the increase is slightly greater proportionately in the Conurbation.

Chapter 2. Live Births

Numbers

2.1 There were 101,292 live births registered in Scotland during 1960 of whom 51,938 were males and 49,354 females. In recent years the number of births has been increasing and in 1960 was 2,041 more than in 1959 and 4,380 above the average.

Rates

- 2.2 The birth-rate was 19.45 per 1,000 population compared with 19.12 in 1959 and the average rate of 18.79. In the immediate post-war years the birth-rate stood at a high level but it declined in the early 1950's. Since 1954 there has been an upward trend and the rate in 1960 is the highest recorded since 1948 when it was 19.69.
- 2.3 It will be seen from Table 2.1 that the birth-rate was 20·2 in the cities, 20·6 in the large burghs, 18·4 in the small burghs and 18·5 in landward areas. Local authority area birth-rates, both crude and standardised for age and sex, are given in Tables 4, 5 and 6.

Table 2.1
Birth-rate in Scotland and its Groups of Public Health Districts in 1960

	Live Births					Bi ₁ Es	Illegiti-		
GROUPS OF DISTRICTS	Total	Legit Males	imate Females	Illegi	Females	Total	Legitimate	Illegitimate	mate Births per 100 Live Births
Counties of Cities Large Burghs Small Burghs Landward SCOTLAND	38,557 18,189 16,186 28,360 101,292	9,040 8,083	17,896 8,491 7,546 13,309 47,242	1,075 348 288 586 2,297	990 310 269 543 2,112	20·18 20·65 18·37 18·47 19·45	19·10 19·90 17·74 17·73	1·08 0·75 0·63 0·74	5·36 3·62 3·44 3·98 4·35

Ratio of male to female births

2.4 In 1960 there were 1,052 male births to every 1,000 female births. The ratio is 10 below that in 1959 and 5 below the average. The highest average ratio of male to female births so far recorded was 1,063: 1,000 in the period 1946 to 1950.

Monthly birth-rates

2.5 As will be seen from Table 63, the monthly birth-rates were generally highest in the first six months of the year. They ranged from 20.4 in April to 18.4 in January.

Multiple births

2.6 The total number of women who gave birth to children, both live and still, in 1960 was 102,275. An analysis of these confinements according to plurality is given in table 2.2 from which it will be seen that there were 101,022 single births, 1,237 twin births and 16 triplet births.

- 2.7 The percentage of mothers who gave birth to two or more children was 1.23 compared with 1.24 in 1959. Details are given in Tables 1 and 2 of the numbers and percentages of multiple births since 1855; prior to 1939 these related to live births only.
- 2.8 Information is given in Table 20 about multiple confinements by age of mother.

Table 2.2 Multiple Births, 1960

No. of Children born	Confinements	Living born children	Stillborn children
1 Living	98,890	98,890	Ministra
1 Stillborn	2,132	-	2,132
2 Living	1,152	2,304	
1 Living 1 Stillborn.	59	59	59
2 Stillborn	26 10	30	52
2 Living 1 Stillborn.	10	30	1 1
1 Living 2 Stillborn.	1	1	2
3 Stillborn	î		2 3
Total .	102,275	101,292	2,252

Illegitimate births

2.9 These numbered 4,409 or 4·35 per cent. of the total live births compared with 4,134 and 4·17 per cent. in 1959. The percentage was 5·4 in the cities, 3·6 in the large burghs, 3·4 in the small burghs and 4·0 in the landward areas. When these births are related to the estimated number of unmarried women aged 15-44, it is found that the rate for Scotland was 11·5 per 1,000 with those for the cities, large burghs, small burghs and landward areas being 13·7, 10·2, 9·0 and 10·6 respectively. (Tables 2.1, 1-4 and 8).

International-rates

2.10 For comparison the birth-rates in certain other countries are given in Table 2.3.

Table 2.3 Birth-rates per 1,000 Population, 1960.

^{*} Jewish population only.

Fertility

2.11 Births and birth-rates in relation to women of child-bearing age in Scotland in 1960 are given in Table 8 for Scotland as a whole, for the administrative areas in the aggregate, and for each county, city and large burgh.

[†] Excluding Maoris.

[‡] European population only.

2.12 A summary of the rates for the three-yearly periods centred on each census from 1861 to 1951 is given in Table 2.4 The number of births per 1,000 married women reached its highest figure of 319·4 in 1870-72. By 1900-02 it had fallen to 271·8 and by 1950-52 that figure was more than halved at 132·3. The 1950-52 rate was about 42 per cent. of the rate of 1860-62.

Table 2.4 Birth-rate in Scotland, per 1,000 Women aged 15-44, 1861-1951

	Birtl	ns per 1,000 We aged 15-44	omen	Legitimate Births per 1,000 Married Women aged under 45					
Year	Rate	Percentage of Rate for Preceding Period	Percentage of Rate for 1860-62	Rate	Percentage of Rate for Preceding Period	Percentage of Rate for 1860-62			
1860-62	144·6 149·4 145·8 132·5 121·9 107·3 105·1 80·1 73·0 80·3	103·3 97·6 90·9 92·0 88·0 97·9 76·2 91·1 110·0	100 103·3 100·8 91·6 84·3 74·2 72·7 55·4 50·5 55·5	316·0 319·4 311·5 296·4 271·8 233·2 226·7 169·0 136·9 132·3	101·1 97·5 95·2 91·7 85·8 97·2 74·5 81·0 96·6	100 101·1 98·6 93·8 86·0 73·8 71·7 53·5 43·3 41·9			

2.13 The yearly rates from 1931 to 1960 are given in table 2.5. It will be observed that in 1960 the rate for all women aged 15-44 was 96·0, appreciably higher than the rate of 79·8 in 1931, and while the rate of 144·2 for married women was the highest since 1947 it was still a good deal lower than in 1931. The reason for the increase in relation to all women of child-bearing age is that the proportion of married women is much increased.

2.14 It would seem that the increase in the number of births per 1,000 married women is due to the larger number of marriages at the younger ages, where fertility is generally highest.

Table 2.5 Crude Birth-rate and rate per 1,000 women aged 15-44 in Scotland, 1931-1960

Year	Crude Birth-rate per 1,000 Population	Births per 1,000 Women aged 15-44	Legitimate Births per 1,000 Married Women aged 16-44	Illegitimate Births per 1,000 Unmarried Women aged 15-44
1931	19.0	79.8	168.3	10.3

1958	19.2	92.8	142.6	10.1
1959	19.1	93.2	141.6	10.5
1960	19.4	96.0	144.2	11.5

Population (Statistics) Acts, 1938 and 1960

2.15 There follows an analysis of the birth statistics obtained for the year 1960 under these Acts.

Gross and net reproduction rate

- 2.16 The crude birth-rate for the year is 19.4 compared with 19.1 in 1959. If current trends of birth and death rates are maintained, the number of female births is more than enough to ensure that the population of Scotland is reproducing itself.
- 2.17 The crude birth-rates and the gross and net reproduction rates for each year from 1939 are given in Table 2.6.

Table 2.6 Crude birth-rate; gross and net reproduction rates, 1939-1960

Year	Crude Birth-rate	Gross Reproduction rate	Net Reproduction rate	
1939	17-4	1.051	0.932	
1940	17-1	1.042	0.896	
1941	17.5	1.058	0.893	
1942	17.6	1.087	0.948	
1943	18.4	1.162	1.012	
1944	18.5	1.183	1.041	
1945	16.9	1.088	0.978	
1946	20.3	1.336	1.192	
1947	22.3	1.427	1.281	
1948	19.7	1.265	1.158	
1949	18.7	1.228	1.131	
1950	18.0	1.187	1.107	
1951	17.7	1.171	1.099 •	
1952	17.7	1.180	1.114	
1953	17.8	1.179	1.121	
1954	18.0	1.212	1.156	
1955	18.0	1.230	1.173	
1956	18.5	1.279	1.228

1958	19.2	1.355	1.302	
1959	19.1	1.350	1.296	
1960	19.4	1.401	1.348	

Age of mother

2.18 Table 9 shows the number of births analysed by age of mother, sex and legitimacy. As usual, more children were born to mothers aged 25-29 than to those in any other quinquennial age-group, but the gap between the figures for this group and for mothers aged 20-24 is now only marginal. The single ages which contributed the greatest number of children were 24, 25 and 23 years both for all births and legitimate births. The largest number of illegitimate births was to mothers aged 21, 19 and 20.

2.19 The number of legitimate births to mothers in the age-group 20-24 has steadily increased since 1939 when these figures were first available and, as Table 2.7 shows, they are now 61 per cent. above the 1939 figure.

Table 2.7 Legitimate births by age of mother, 1939, 1947-1960

Year	Total Legitimate Births		Legitimate Bi		Proportion compared with 1939

Illegitimate Births per 1,000 Unmarried Women

	All Ages						
Year	(15-49)	15-19	20–24	25–29	30-34	35–39	40-44
1939	7.7	5.3	12.0	11.5	10.6	7.7	2.8
1947	11.2	4.7	17.5	26.5	19.5	12.6	4.1
1948	10.4	4.8	15.4	24.9	19.7	12.1	4.0
1949	9.6	4.3	14.1	21.5	21.1	11.3	3.7
1950	9.0	4.1	12.8	19.9	19.0	11.6	3.6
1951	8.6	3.7	12.4	18.6	18.9	12.5	3.0
1952	8.2	3.7	11.7	17.6	18.2	11.2	3.5
1953	8.3	3.8	12.1	16.7	18.1	12.1	3.4
1954	8.4	3.8	12.4	17.7	16.9	13.4	3.3
1955	8.2	3.6	12.5	17.3	18.1	11.9	3.8
1956	8.6	4.2	13.3	18.8	18.4	11.6	3.4
1957	8.8	4.2	14.1	19.9	17.6	12.2	3.6
1958	9.1	4.1	15.0	22.3	19.0	11.8	3.7
1959	9.5	4.3	15.3	26.1	18.6	11.5	3.6
1960	10.4	4.9	17.0	28.2	20.2	14.6	4.3

2.21 On comparing the legitimate rates for 1960 with those of 1959 it will be observed that there are small increases in each age-group, except 35-39. There was an increase in the illegitimate fertility rates in every age-group.

Age of mother and duration of marriage

2.22 The 96,883 legitimate births are tabulated by age of mother and duration of marriage in Table 10. Further analyses by social class are given in Table 28.

Age of mother and duration of marriage—First births

2.23 Table 12 shows the interval between present marriage and the birth of the first child for all first children born in 1960 according to the age of mother. The following table gives a summary for the years 1939 and 1947 to 1960 of the percentage of first births occurring within eight months of marriage.

Table 2.9 Percentage of First Births taking place within Eight
Months of Date of Present Marriage

		Δ	ge of Moth	ner.		
Year	All ages	Under 20	20-24	25-29	30-34	
1939	28.8	70.1	40.3	17.0	10.0	
1947	15-1	50.8	18.9	9.6	7.7	
1948	19.1	56.6	23.7	11.6	8.4	
1949	20.4	59.8	24.3	11.3	8.7	
1950	20.2	60.0	24.6	10.0	8.1	
1951	19.8	60.3	23.6	9.9	9.1	
1952	19.2	59-4	22.5	9.3	8.6	
1953	18.6	59.9	21.7	8.8	7.0	
1954	18.2	59.8	20.7	7.3	6.4	
1955	 17.6	56.1	19.6	7.3	7.0	
1956	17-7	56.1	18.8	7.2	6.8	
1957	16.8	54.4	17.4	6.8	5.8	
1958	16.9	54.1	16.8	6.4	6.5	
1959	17.6	55.5	17-4	6.6	5.8	
1960	18.6	57.8	17.7	7.3	6.0	

2.24 There were 6,212 first births within eight months of marriage and they represent 18.6 per cent. of all first births, 1.0 higher than that for 1959. If these are added to the number of illegitimate births, the combined total of 10,621 is 2,962 below the figure of 13,583 in 1939 but 548 above that for last year.

Age of mother and birth order

2.25 Analyses are given in Table 13 of legitimate births by age of mother and birth order (i) for all husbands and (ii) by present husband. A summary is given in Table 2.10 of birth order by present husband for the years 1939 and 1952 to 1960.

Table 2.10 Number of Births by Present Husband which are First, Second, etc.

Number of pre- vious children (including still- born and dead)	1939	1952	1953	1954	1955	1956	1957	1958	1959	1960
0	28,976	31.468	31,641	32,313	32,738	33,681	34,923	34,394	33,677	33,443
1	19,473	24,214	24,233	24,744	24,544	26,032	26,488	27,642	27,429	28,347
2	11,757	13,758	14,073	14,146	14,309	14,615	15,066	15,433	16,011	16,687
3	7,391	7,316	7,507	7,619	7,538	7,566	7,787	8,185	8,163	8,530
4	4,771	3,871	3,990	4,165	4,166	4,093	4,262	4,350	4,356	4,473
More than 4	9,301	5,356	5,159	5,125	5,186	5,223	5,388	5,381	5,444	5,377
Not stated	-	133	79	26	67	34	46	23	37	26
TOTAL	81.669	86,116	86,682	88.138	88.548	91.244	93,960	95,408	95.117	96.883

- 2.26 In 1960 there was an increase of 1,766 legitimate births compared with 1959. While first births decreased by 234 there were increases in second, third, fourth and fifth births.
- 2.27 An examination of Table 2.10 shows that the proportion which first births bore to the total legitimate births was 35.5 per cent. in 1939. This percentage has recently fluctuated only slightly being 36.5 in 1952, 37.2 in 1957, 36.0 in 1958, 35.4 in 1959 and 34.5 in 1960.

Duration of marriage and birth order

2.28 Table 14 shows legitimate births by duration of present marriage and number of previous children. It also indicates the trend of family size. The average family size—but only for those families having a child in the year under observation—is given in Table 2.11 for 1939 and 1949 to 1960. The figures shown include the birth in the particular year referred to as well as previous births. They show that the average size of family into which a child was born was lower in the post war years. In 1939 the figure was 2.79 compared with 2.43 in 1960. Since 1949 the average has fluctuated between 2.39 and 2.45.

Table 2.11 Average number of children by present husband in family including stillborn and dead, 1939, 1949-1960

Duration of Marriage	1939	1949	1950	1951	1952	1953	1954	1955	1956	1957	1958	1959	1960
Under one year 1 2 3 4 4 5 6 7 8 9 10-14 15-19 20-24 25 and over Total	 1·03 1·29 1·77 2·14 2·48 2·77 3·17 3·50 3·83 4·10 5·06 6·93 8·94 10·68	1·03 1·23 1·71 2·01 2·25 2·49 2·65 2·81 3·02 3·37 4·29 6·15 7·78 9·54	1·03 1·24 1·73 2·06 2·30 2·53 2·76 2·94 3·08 3·26 4·18 6·13 7·91 9·53	1·03 1·27 1·71 2·04 2·33 2·56 2·78 3·00 3·20 3·35 4·13 5·97 7·90 9·69	1·03 1·22 1·69 2·03 2·35 2·60 2·83 2·99 3·28 3·44 4·06 5·90 7·81 9·54	1·02 1·22 1·66 2·03 2·29 2·58 3·08 3·27 3·52 4·05 5·76 7·74 9·02	1·02 1·22 1·67 1·98 2·29 2·58 2·85 3·11 3·34 3·54 4·12 5·63 7·59 9·04	1·02 1·22 1·68 1·99 2·30 2·57 2·86 3·11 3·39 3·63 4·17 5·49 7·40 8·88	1·02 1·22 1·69 2·00 2·27 2·55 2·84 3·10 3·34 3·63 4·14 5·42 7·28 8·59	1·02 1·22 1·69 2·00 2·29 2·53 2·81 3·12 3·36 3·62 4·16 5·25 7·20 9·14	1·02 1·22 1·71 2·02 2·29 2·57 2·83 3·10 3·37 3·68 4·20 5·26 7·00 8·31	1·02 1·23 1·70 2·03 2·33 2·61 2·85 3·10 3·35 3·65 4·27 5·29 6·84 8·28	1·03 1·25 1·72 2·04 2·33 2·62 2·87 3·11 3·36 3·59 4·26 5·31 6·92 6·56

Infertility among women who had been married

2.29 Tables 15 and 16 contain statistics of women who have been married but at the time of death are stated to have had no children. The results are summarised in the following Table 2.12. It will be seen that the percentage of women who died childless gradually decreased from 15·6 in 1948 to 14·7 in 1952, but since then there has been an upward trend ranging from 15·0 in 1953 to 15·7 in 1960. The number of deaths among divorced women is too small to give in Table 2.12 reliable rates for individual years. Eleven per cent. of the married women who died childless were aged under 45 years when the comparable figure for widows was only 0·2 per cent.

Table 2.12 Percentage of Women who have been Married and who at Death are stated to have had No Children

		1939	1948	1949	1950	1951	1952	1953	1954	1955	1956	1957	1958	1959	1960

Chapter 3. Marriages

3.1 The information given in this chapter about marriages registered in Scotland during 1960 is based on statistical returns made by district registrars. After a complete examination of the 1960 marriage registers has been made a much fuller study will be given in an appendix to the 1961 Report. This will take the form of the analysis of the 1959 marriages given in Appendix IV of this Report.

Numbers and rates

3.2 There were 40,101 marriages in Scotland in 1960, 341 fewer than in 1959 and 2,189 below the average. The rate per 1,000 of the population was 7.70, compared with a rate of 7.79 in 1959 and the average rate of 7.20.

Seasonal incidence

3.3 The seasonal incidence of marriage, during the hundred years 1861 to 1960, is the subject of a new table (Table 3.1). In recent years the most popular month has been March, followed by July and September; the least popular month has been May.

							_

Urban and rural rates

3.4 It will be seen from Table 3.2 that the marriage rate was highest in the cities and burghs and lowest in the landward areas; this is invariably the case. The true urban-rural difference in this respect is almost certainly overstated as many of the people living in rural areas go to a town or city to be married. When the parties come from different areas it is not possible to correct the marriage figures according to normal residence as it is customary to do for births and deaths.

Authorised by sheriff's licence		. 254	156	51	27	20

Civil marriages

- 3.6 The first full year in which the Marriage (Scotland) Act, 1939, took effect was 1941 when the percentage of civil marriages was 11·3. The percentage rose steadily until it was 19·2 in 1955, since when it has declined slightly, being 17·9 in 1960 (Table 49).
- 3.7 In 1960 the percentage of civil marriages ranged from 25.2 in the cities and 18.7 in the large burghs to 13.8 in the small burghs and 6.3 in the landward areas.

International-rates

3.8 A selection of the 1960 marriage rates in other countries is given in Table 3.4.

Chapter 4. Divorces

Number of decrees

4.1 During 1960 the number of marriages which were dissolved by decrees pronounced in the Court of Session totalled 1,828, of which 1,804 were decrees of divorce, 19 were nullities and 5 were dissolutions of marriage on a presumption of death of one of the parties.

Trends

4.2 Details are given in Table 4.1 of the various forms of decree in ten-yearly periods from 1855 to 1954 and annually from 1945. Divorces increased from 1,687 in 1959 to 1,804 in 1960 and thus halted the downward trend apparent since 1952. Even so, the 1960 figure was below the 1955-1959 average of 1,818.

Divorce statistics of persons married in Scotland

- 4.3 The divorce data in the text and tables that follow relate to those persons who were married in Scotland and who obtained their decree of divorce from the Court of Session.
- 4.4 Table 4.2 shows the conjugal condition of the parties at time of marriage for the years 1948-1960.

Table 4.2 Divorce Statistics of Persons Married in Scotland, 1948-1960

	Marital Condition at Time of Marriage

1959	1,398	41	46	1,485	1,402	40	43					
1960	1,499	37	-64	1,600	1,508	36	56					

- 4.5 There were 1,600 divorces in 1960 and in 1,128 cases the marriage was performed by a minister of religion, 408 by a registrar and 64 were irregular marriages which had been authorised by a Decree of Declarator.
- 4.6 Analyses have been made of the 1960 divorces, showing the age of the wife in relation to the age of husband (i) at time of divorce (Table 4.3) and (ii) at date of marriage (Table 4.4), and age of wife at time of divorce with duration of marriage (Tables 4.5 and 4.6).

Chapter 5. Mortality

GENERAL

Numbers

5.1 There were 61,764 deaths registered in Scotland during 1960, of whom 31,682 were males and 30,082 were females. The total number was 1,297 below that in 1959 and 177 below the five years' average.

Crude and standardised death-rates

- 5.2 In Table 5.1 the crude and standardised death-rates are given for each year from 1931 to 1960.
- 5.3 There has been a steady improvement in the crude rates in the twenty year period and the adverse influence on mortality of the ageing of the population has been allowed for by standardisation. A comparison of the general deathrates shows that while the crude rate has declined by 11 per cent. since 1931 the standardised rate has improved by no less than 40 per cent.

[†] Civilian death-rates

Area death-rates

5.4 The crude rates do not vary greatly between urban and rural areas, being 12·1 per 1,000 in the cities, 11·2 in the large burghs, 13·1 in the small burghs and 11·2 in the landward areas. But when the rates are standardised for difference of age and sex constitution the urban rates are appreciably higher. The standardised rate for the cities was 12·6, for the large burghs 12·0, for the small burghs 11·9, and for the landward area only 10·9. (Table 5.2).

Table 5.2 Deaths in Scotland and its Groups of Local Authority Districts in 1960

	Dea	aths	Death-rate per 1,000 of Population		
Groups of Districts	Registered Numbers	Corrected for Transfers	Corrected for Transfers	Corrected for Transfers and Adjusted for Age and Sex Distribution, 1951	
Counties of Cities . Large Burghs Small Burghs Landward	25,250 10,574 8,887 17,053	23,197 9,889 11,526 17,152	12·14 11·23 13·08 11·17	12·65 12·04 11·84 10·84	
SCOTLAND	61,764	61,764	11.86	-	

^{*}Standardised to a Standard International Population, 1900-

- 5.5 In the cities and large burghs the standardised rate ranged from 13·7 in Glasgow to 10·2 in Kirkcaldy and in the counties from 13·9 in Bute to 8·5 in Caithness. (Table 4).
- 5.6 The highest death-rate of the year occurred in February, 14·4, and the lowest in July, 10·0. (Table 63).

Death-rates by age and sex

- 5.7 Death-rates by age and sex are given in Table 5.3 for five yearly periods from 1911 to 1960 and for single years since 1951.
- 5.8 The death-rates show a rapid decline from the high rates in the first year of life to a minimum in age group 10-14. There is an increase in the rates thereafter, gradual at first but becoming more pronounced at higher ages. It will be observed from Table 5.13 that in 1960 the male rate exceeded the female one in each age-group except 85 and over. (Table 35).

Table 5.3 Age-group Death-rates per 1,000 of Population from 1911 to 1960

Centenarians

5.10 Seventeen deaths of reputed centenarians were registered during the year—four males and thirteen females. In each case the age was verified as being at least 100 years, the verified age being 100 years in eight cases, 101 years in three cases, 102 in three cases, 104 in two cases and 105 in one case. Since 1910, when enquiries regarding such cases were begun, 719 deaths have been registered as being of centenarians, 120 of males and 599 of females. The age has been verified as being at least 100 years in 461 cases (67 males and 394 females); in 106 the evidence was rather against the claim; while in 152 cases no satisfactory evidence of age could be found. The greatest age verified was one of 109 years and 14 days in 1936.

Chapter 6. Causes of Death

Certification

6.1 The number of deaths registered in Scotland in 1960 was 61,764. The cause of death was specified in 61,447 cases or 99.5 per cent. of the total deaths registered and this number includes 450 deaths attributed to senility.

6.2 In 317 cases or 0.5 per cent. of the total registered deaths the cause was either ill-defined or unknown and, of these, 51 were ascribed to heart failure, 28 to syncope, 28 to convulsions in children under 5 years, 10 to uræmia and 8 in which no cause was specified.

6.3 In the text which follows the numbers given in brackets after a cause of death are Detailed List rubrics of the International Statistical Classification (1955), Seventh Revision.

Principal epidemic diseases

6.4 This group is now taken to comprise typhoid fever (I.S.C. No. 040), scarlet fever (050, 051), diphtheria (055), whooping cough (056), meningococcal infections (057) and measles (085). For comparison with previous years deaths from influenza (480-483) are also included. The total number of deaths in the group in 1960 was 136. The equivalent death-rate is 3 per 100,000 population which compares with 12 in 1959 and an average rate of 8.

6.5 There were 10 deaths from whooping cough in 1960, 2 more than in the previous year. Influenza accounted for 104 deaths in this group compared with 583 in 1959. In table 6.1 the number of certified deaths is given in which influenza was mentioned not as a primary but as a contributory cause. There were 19 (23 in 1959), from meningococcal infections, 2 (18) from measles and 1 (1) from scarlet fever and streptococcal sore throat. There were no deaths from diphtheria or typhoid fever.

6.6 Deaths in the whole of this group of the main epidemic diseases accounted for 0.2 per cent. of all deaths in Scotland in 1960. (Tables 35-40).

Tuberculosis (I.S.C. Nos. 001-019)

- 6.7 Deaths from all forms of tuberculosis numbered 509 compared with 576 in 1959 and the average of 754. The death-rate from tuberculosis was 10 per 100,000 of the population compared with 11 the previous year and the average of 15. (Tables 35, 37-40).
- 6.8 Since 1855, when the registration of deaths began, mortality from tuberculosis has continuously decreased decade by decade, though the decline was checked temporarily in the two world wars. Since 1947 the rate has fallen from 81 to 10.
- 6.9 In 1960, death-rates from tuberculosis were heaviest at ages 55-84 in males and 35-44 and 65-84 in females. (Table 35).
- 6.10 Deaths from tuberculosis were most numerous in January, 61, February, 61, and December, 52, and fewest in June, 31, October, 31, August, 29, and September, 23. (Table 43).
- 6.11 The rate in the cities was 14 per 100,000, in the large burghs 10, in the small burghs 9 and in the landward areas 5. In the cities and large burghs the rates ranged from 21 in Inverness, Falkirk and Glasgow to 2 in Dunfermline. In the counties (excluding large burghs) the rate ranged from 19 in Selkirk to 1 in Aberdeen. There were no deaths from tuberculosis in the Counties of Berwick, Kincardine, Kinross, Nairn, Orkney and Zetland. (Table 4).

Respiratory tuberculosis (I.S.C. Nos. 001-008)

- 6.12 93 per cent. of the deaths from tuberculosis in 1960 were due to the respiratory forms of the disease. They numbered 473 compared with 513 in 1959, and the average of 678. The death-rate from respiratory tuberculosis in 1960 was 9 per 100,000 (males 13, females 5) compared with 10 in 1959 (males 14, females 6). The heaviest death-rates in males in 1960 were at ages 65-84, in females at 75-84. The lowest rates for males and females were recorded at ages under 25 years. (Tables 35, 37-40).
- 6.13 Table 6.2 shows the changing incidence of death-rates in different age groups since 1938. It will be noted that the general fall in mortality is not shared by men aged 65 and over.

Table 6.2 Death-rates per 100,000 from Respiratory Forms of Tuberculosis, 1938-1960

				LES				ALES

1959		0	7	27	52	. 0	. 7	9	10
1960		0	6	27	53	0	6	6	10

- 6.14 The range of monthly incidence was from 20 in September to 59 in February. (Table 43).
- 6.15 The rate in the cities was 13 per 100,000, in the large burghs 10, in the small burghs 8 and in the landward areas 5. The highest rates in the cities and large burghs were 18 in Greenock and 19 in Falkirk and Glasgow.

Non-respiratory tuberculosis (I.S.C. Nos. 010-019)

- 6.16 Deaths from non-respiratory forms of tuberculosis numbered 36 compared with 63 in 1959 and the average of 76. The rates per 100,000 were 1 for males and 1 for females which are the same as those in the three years 1957 to 1959.
- 6.17 The rate for non-respiratory tuberculosis averaged more than 100 per 100,000 population until 1880, fell rapidly to 72 in 1883, and thereafter more gradually, reaching a level of 60 prior to the first world war. By 1920 the rate had fallen to less than 40, and at the outbreak of war in 1939 it was 16. As with respiratory tuberculosis, the decline was interrupted for a few years during and after the war, but at the rate of one in the last four years contrasts with a pre-war rate of 16 per 100,000. (Tables 35, 37-40).

Other infective and parasitic diseases (remdr. 020-138)

6.18 Deaths from syphilis and its sequelae numbered 64, of which 15 were attributable to aneurysm of aorta, 25 to the nervous affections, including tabes dorsalis and general paralysis of the insane. Deaths from syphilis and its sequelæ for the period 1855 to 1960, are given in Table 6.3.

Table 6.3 Deaths from Syphilis and its Sequelæ, 1855-1960 (Decennial Averages, 1855-1960)

Note.—The symbol — indicates the number is not available.
The numbers for decennial periods are annual averages. * Aneurysm (all sites).
† Excludes dissecting aneurysm unqualified, 1951-1957.
‡Excludes dissecting aneurysm unqualified in the year 1950.
§Excludes aneurysm of abdominal aorta and dissecting aneurysm unless specified as syphilitic, 1958-1960.

6.19 There were no deaths from acute and late effects of acute poliomyelitis (080, 081), (one in 1959), 35 from infectious encephalitis (082, 083) and 35 from infectious hepatitis (092).

6.20 Other deaths in this group include 17 from septicæmia and pyæmia (053) and one from tetanus, the result of a five year old girl falling and skinning her knee.

Malignant neoplasms (I.S.C. Nos. 140-205)

6.21 Deaths from this group numbered 11,033 (males 5,815 and females 5,218) equivalent to a death-rate of 212 per 100,000. This rate is the same as that for the previous year but 3 above the average.

6.22 The death-rates per 100,000 of the population from malignant neoplasms from 1931 to 1960 are shown in Table 6.4. In the intervening years the population has aged appreciably and comparisons of crude death-rates do not allow for that. The table therefore also gives rates standardised to the age structure of the population when last known, i.e. at the census of 1951.

6.23 The increase in the crude rate is substantial. It was accelerated during the recent war but this was mainly attributable to the withdrawal from the population, temporarily on war service, of numbers of younger persons less vulnerable to diseases of this kind. Since 1931 the crude rate has increased by 43 per cent. but the standardised rate by only 9 per cent. The standardised rate provides the truer basis of comparison, allowing as it does for the ageing of the population.

6.24 The standardised rate for males rose from 186 in 1931 to 246 in 1960, an increase of 32 per cent. compared with an increase of 66 per cent. in the crude rate. On the other hand the standardised rate for females decreased from 182 to

166, a reduction of 9 per cent. compared with an increase of 25 per cent. in the crude rate.

6.25 As Hodgin's disease, leukaemia, aleukaemia and mycosis fungoides were omitted from the malignant neoplasms before 1950 the rates for that year are calculated on the number of deaths classified to both the 5th and 6th Revisions of the International List of Causes of Death. An allowance can therefore be made for the years prior to 1950.

Table 6.4 Death-rate per 100,000 Population from Malignant Disease

^{* 5}th Revision.

6.26 Table 6.5 has been prepared to show death-rates per million, by age and sex, from cancer of the lung and bronchus during the period 1951-1960. Among males the rates have remained fairly steady up to age 55 but thereafter have increased, especially so in those aged 70-84. Among females the rates have exhibited a somewhat similar trend but there have not been any spectacular increases in the later age-groups.

6.27 Age specific death-rates, by sex, are given in Table 6.6 for the principal sites, in the periods 1920-22, 1930-32, 1940-42, 1950-52 and 1960. When examining this table it should be remembered that the inclusive terms of any particular site may differ from one period to another because of the several revisions of the International Classification of Causes of Death made in the past forty years. Rubric numbers in use at the selected periods are given in a footnote to the table.

Diabetes (I.S.C. No. 260)

6.28 Deaths from this cause numbered 555 (146 males and 409 females), 5 more than in 1959 and 52 above the average. The much heavier female rate is most in evidence at the highest age groups. (Tables 35 and 37).

Anæmias (I.S.C. Nos. 290, 293)

6.29 Deaths from this cause numbered 247, of which 76 were of males and 171 of females. In 1959 the number was 245. The majority of deaths in the group are due to pernicious and other hyperchromic anæmias and these account for 134.

Other general diseases (remdr. 240-299)

6.30 In addition to the foregoing there were 132 deaths from asthma, a decrease of 34 compared with 1959, 19 deaths from thyrotoxicosis, (27 in 1959), and 62 from other diseases of thryoid gland (66 in 1959).

Diseases of the nervous system (I.S.C. Nos. 330-398)

- 6.31 In this group there were 10,657 deaths, of which the majority (9,850) were from vascular lesions affecting the central nervous system. Most of the latter are certified as either cerebral and subarachnoid hæmorrhages 4,087, or cerebral embolism and thrombosis, 4,828. Apart from these, though much less important numerically, the main nervous diseases were paralysis agitans, 187, multiple sclerosis, 156, epilepsy, 102, and other cerebral paralysis, 79. Nonmeningococcal meningitis deaths numbered 56 compared with 46 in 1959.
- 6.32 The vascular lesions of the central nervous system show a heavier crude death rate in females, but for other diseases of the central nervous system there is little sex difference.

Diseases of the circulatory system (I.S.C. Nos. 400-468)

- 6.33 Deaths in this group numbered 23,742 of which 21,373 were ascribed to heart disease. The number increased steadily from 9,535 in 1931 to 16,503 in 1940. Change of classification in 1941 reduced this number slightly (about 1 per cent.) and in the two following years there was a substantial diminution in deaths from these causes. Since then there has been an irregular increase. The change of classification between the fifth and sixth revision accounted for an increase of only one half per cent. in deaths allocated to this group.
- 6.34 Of the total deaths from diseases of the heart (I.S.C. Nos. 410-443) the vast majority, 18,580, were ascribed to the arteriosclerotic or degenerative categories. Of these 11,326 were arteriosclerotic heart disease (including coronary thrombosis), 6,923 other forms of myocardial degeneration and 331 chronic endocarditis not specified as rheumatic.
- 6.35 Mortality ascribed to coronary thrombosis shows a progressive increase with age both in males and females, but at each age the rate in males exceeds that in females, although the extent of this differs widely throughout the age span. At ages under 35 the number of deaths is small and the sex ratio is irregular. From ages 35 and over there is a decided divergence in the rates for the separate sexes. In age-group 45-49 the male rate is almost six times that of the female. After age 50 the male: females ratio declines progressively, until in the oldest age groups the male mortality is only a little more than the female.
- 6.36 Deaths from chronic rheumatic heart disease numbered 741 compared with 816 in 1959. Acute rheumatic fever accounted for 17 deaths, a decrease of 4

from the previous year. Deaths from acute non-rheumatic conditions of the heart were 92. Functional and other unspecified diseases of the heart caused 809 deaths. Hypertension accounted for 1,671 of which 1,151 were associated with heart disease.

6.37 Age specific death-rates are given in Table 6.7 for heart disease, coronary thrombosis and myocardial degeneration, covering the period 1920 to 1960. When examining this table it should be remembered that the inclusive terms of any particular cause may differ from one period to another because of the several revisions of the International Classification of Causes of Death made in the past forty years. The Rubric numbers in use at the selected periods are given in a footnote to the table.

6.38 General arteriosclerosis was the most important of the circulatory diseases apart from the heart, and in 1960 there were 1,297 deaths ascribed to this cause, compared with 1,328 in 1959.

Diseases of the respiratory system (I.S.C. Nos. 470-527)

6.39 Deaths from these causes accounted for 4,870 deaths, compared with 6,273 in 1959. Of these the principal individual causes were bronchitis, 2,214, bronchopneumonia, 1,458, lobar pneumonia, 341, and pneumoconiosis, 201. Age specific death-rates are given in table 6.8 for bronchitis, covering the period 1920 to 1960. When examining this table it should be remembered that the inclusive terms of bronchitis may differ from one period to another because of the several revisions of the International Classification of Causes of Death made in the past forty years. Rubric numbers in use at the selected periods are given in a footnote to the table.

6.40 In 1960 deaths from pneumonia and bronchitis numbered 4,222 and were 73 below the five years' average.

Diseases of the digestive system (I.S.C. Nos. 530-587)

6.41 Deaths in this group numbered 1,988 compared with 1,915 in 1959. The principal conditions under this heading are ulcer of stomach, 233, and ulcer of duodenum, 329, hernia and intestinal obstruction, 344, and cirrhosis of the liver, 225. There were 73 deaths from diarrhœa of children between four weeks and under 2 years of age compared with 92 in 1959.

Diseases of genito-urinary system (I.S.C. Nos. 590-637)

6.42 These collectively numbered 1,189 deaths and are 13 fewer than in 1959 and 62 below the average of the past five years. The principal components of the group are chronic nephritis, 266, and diseases of the prostate, 367. Deaths from diseases of the prostate were 4 fewer than in 1959.

Diseases of pregnancy and childbirth (I.S.C. Nos. 640-689)

6.43 These numbered 35 and are one fewer than in 1959. They are 11 below the average of the past five years and roughly a third of what were so registered ten years ago. The most prominent constituents are complications of the puerperium, 14, complications of pregnancy, 12, delivery with specified complication, 6, and abortion, 3. The total deaths represent a rate of 0.3 per 1,000 live births. (Table 6.9).

6.44 In addition to the deaths classified as due to puerperal conditions, there were 17 which occurred during pregnancy or within four weeks thereafter, but in which the puerperal condition was not specified as the primary cause of death. These are shown in detail in Table 6.10. The number in 1960 is 10 fewer than in 1959.

			Ages								
International Abbreviated List 'B'	Cause of Death	Total	1	20-24	25-29	30-34	35-39	40-44	45 and over		
1 17 21 46.0 46.1 24 25 31 36.1 38 E47	Tuberculosis of respiratory system . Other infective and parasitic diseases Anæmias	2 1 1 2 1 1 3 1 2 1 2 1 2 1 7				1	2 1 - 1 1 - 5				

Diseases of skin and cellular tissue (I.S.C. Nos. 690-716)

6.45 There were 44 deaths from these causes compared with 53 in 1959.

Diseases of bones and organs of movement (I.S.C. Nos. 720-749)

6.46 These causes accounted for 272 deaths during the year, 3 fewer than in 1959. Rheumatoid arthritis and allied conditions was the principal cause in this group and of the 163 deaths from this cause 27 were males and 136 females.

Malformations (I.S.C. Nos. 750-759)

6.47 There were 659 deaths from these compared with 718 in 1959. Congenital malformations of the circulatory system were the most frequent and numbered 220. These were followed by spina bifida, 126, digestive system, 78, hydrocephalus, 72, and genito-urinary system, 62. The vast majority, 77 per cent. of these deaths took place in the first year of life.

6.48 Table 6.11 shows these deaths distributed in age groups. Of the 659 who died from congenital malformations 505 died at ages under one year and of these 234 did not survive a week. Table 6.12 shows for each of the principal causes in the group and also for certain diseases of early infancy, the rate per 1,000 births in each quinquennium since 1936 and for 1959 and 1960. The rate for congenital malformations was 6.51 in 1960 compared with 7.23 in 1959. A more accurate rate is obtained by limiting the deaths to those which occurred in the first year of life, but this does not materially affect the trend.

6.49 Internal changes in classification of causes such as prematurity affect some of the rates when comparing 1950 onwards with earlier years.

Includes pneumonia of newborn and diarrhœa of newborn.

Diseases of early infancy (I.S.C. Nos. 760-776)

6.50 Deaths from this group of causes totalled 1,463 compared with 1,502 in 1959. The most important individual component of this group is postnatal asphyxia and atelectasis, deaths from which numbered 529—over a third of the total. Prematurity unqualified, 330, birth injury, 304, pneumonia of newborn, 90, and haemolytic disease of newborn, 66, are next in order of importance. Out of the 1,463 deaths ascribed to certain diseases of early infancy, 330 were classified to prematurity, but it is perhaps worth mentioning that of the other 1,133 deaths in this group 538 had a mention of prematurity on the death certificate. Mortality ascribed to prematurity and, even more, to congenital debility has shown remarkable improvement recently. Deaths from injury at birth have shown no such favourable change. The rate per 1,000 live births for 1960 was 3.00 compared with 2.86 in 1959.

Senility (I.S.C. No. 794)

6.51 Only 450 deaths were so attributed. In spite of the ageing of the population the numbers here have shown fairly steady diminution, and it is clearly due to transfer to other cause groups, presumably as a result of more specific certification.

Violence (I.S.C. E.800-E999)

- 6.52 2,867 deaths from causes other than natural causes were registered in 1960. 2,422 were from accidents, 408 from suicide, 34 were caused by homicide and 3 were due to late effects of war operations.
- 6.53 There were 793 deaths from transport accidents in 1960, 69 more than in 1959. The majority were motor vehicle accidents—676—an increase of 63 from the previous year. Of the remainder, 39 were from railway accidents, 15 from road transport fatalities other than with motor vehicles, 51 in water transport accidents and 12 in air transport accidents.
- 6.54 The number of deaths from road transport accidents in Scotland from 1934 is set out in summary form in Table 6.13. The figures are given by sex and age. It will be seen that at all ages accidents have taken a much heavier toll of the male than of the female population.

Table 6.13 Deaths from Road Transport Accidents, 1934-1960

^{6.55} Table 41A shows other deaths by accident (International Detailed List Nos. E870-E936, E961, E962) classified by sex and age in cause groups, and place of occurrence.

^{6.56} Deaths in the **home** in 1960 made up as usual the greatest individual group of fatal accidents. They numbered 1,050 or 43 per cent. of the total deaths from accidents. The number was 36 fewer than in 1959.

^{6.57} The causes of accidents in the home are shown in more detailed age groups in Table 6.14 (page 33).

6.58 Accidental falls were the main cause, accounting for 514 deaths or 49 per cent. of the total deaths through accidents at home. These deaths from falls were much heavier among females, numbering 383, and they took a very much heavier toll of older persons, as is seen from the fact that 90 per cent. of the deaths were of persons aged 65 and over (males 80 per cent., females 94 per cent.).

6.59 Gas poisoning was the second heaviest cause of deaths in the home, and it will be seen from the table that in 1960 there were 196 deaths (90 of males and 106 of females). Of these 111 were stated to be accidental and 85 were unspecified as to whether accidental or suicidal. 104 of the deaths from gas poisoning were among persons aged 65 and over (males 28, females 76).

6.60 The third heaviest cause was suffocation, which caused 143 accidental deaths in 1960. No less than 122 or 85 per cent. were deaths of children under one, and 7 of the remainder were of children between one and four. 74 of the deaths of children under one were due to inhalation and ingestion of food causing obstruction or suffocation. Of the remaining 48 deaths of children under one 39 were due to suffocation in bed or cradle.

6.61 Accidents caused by fire, etc., were the next heaviest contributor to deaths in the home in 1960. They caused 93 deaths. Among these there were 12 children under five and 48 persons aged 65 and over.

6.62 Accidents in residential institutions accounted for 65 deaths, 4 more than in 1959. Fifty-nine of the deaths were due to falls and 56 of this cause group were aged 65 and over.

- 6.63 There were 55 deaths due to fatal accidents in mines and quarries compared with 96 in 1959. Four deaths were caused by fire and explosion of combustible material (47 in 1959) 27 by blows from falling objects (35), 6 by machinery (5) and 10 by mine vehicles (4).
- 6.64 Farm and forest accidents claimed 10 deaths, 6 fewer than in 1959. Two caused by falls, 3 by electric current and 3 by machinery. In addition there were 6 deaths due to accidents in which farm tractors, etc., were involved.
- 6.65 There were 139 deaths from accidents in industrial places, 47 of which were due to falls, 29 to blows from falling objects and 29 to fire etc.
- 6.66 Accidents in the street and highway were responsible for 30 deaths, 26 of which were due to falls.
- 6.67 In other specified places there were 249 deaths, 182 of which were caused by drowning and 30 by falls, mainly on mountains and hills.
- 6.68 A further 31 deaths occurred in places which were not adequately specified.
- 6.69 The following Table 6.15 compares in broad age-groups the deathrates per 100,000 of the population of males and females from accidents at home and from accidents elsewhere (excluding transport accidents).

Table 6.15. Death-rate per 100,000 from Accidental Deaths (excluding Transport Accidents)

		All ages	0-4	5–14	15-44	45–64	65 and over
Accidents at Home	Male Female	16 24	44 28	2	4 3	15 10	73 145
Accidents elsewhere	Male Female	19 4	8 2	9	17 1	24 3	41
Total	{ Male Female	35 28	52 30	12 4	21 4	40 13	114 163

- 6.70 The over-all male rate is lower than for females as regards accidents at home; but it will be observed that the male rate is higher in each individual age-group except for 65 and over where the rate for females is twice as high. The figures show that males are more vulnerable to accidents outside the home in the proportion of almost five to one. The difference is even greater in the age-groups between 15 and 64.
- 6.71 Suicide. Deaths from suicide numbered 408, 263 males and 145 females. This represents a death-rate of 8 per 100,000 compared with 9 for 1959 and 3 below the average of the last five years. (Tables 41B and 42).
- 6.72 Accidental and suicidal poisoning. The agents used in the 273 accidental and 253 suicidal deaths from poisoning are given in Table 41B.
- 6.73 Anæsthetics. Details are given in table 41c of the anæsthetic administered in the case of deaths which were primarily due to complications of anæsthesia for non-therapeutic purposes and therapeutic misadventure in anæsthesia (none in 1960) and of the 113 deaths where there was mention of anæsthetic other than as primary cause.

Relative frequency of cause of death

6.74 The commonest causes or cause groups of death and their percentages of total deaths are given in Table 6.16.

Table 6.16. Relative Frequency of Causes of Death

		1960	1959				
Causes of Death	Number	Per cent. of total	Number	Per cent. of total			
Heart disease Malignant neoplasms Vascular lesions of the central nervous system Violence Bronchitis Congenital malformations and diseases of early infancy Pneumonia (excluding pneumonia of newborn)	21,373 11,033 9,850 2,867 2,214 2,122 2,008	34·60 17·86 15·95 4·64 3·58 3·44	21,122 11,032 9,862 2,860 2,556 2,220 2,557	33·49 17·49 15·64 4·54 4·05 3·52 4·05			
TOTAL .	51,467	83-33	52,209	82.79			

6.75 Death-rates in Scotland compared with those in England and Wales, Northern Ireland and the Irish Republic—Precise comparisons between the death-rates in Scotland and those in England and Wales, Northern Ireland and the Irish Republic cannot be made from an examination of the crude death-rates in the four countries. By agreement between the Registrars-General, death-rates have been standardised to the age and sex distribution of the United Kingdom and the Irish Republic.

6.76 Table 48 gives the standardised mortality ratios for the four countries for all causes and for a specially selected list of causes for the year 1960. It also shows the age specific death-rates by sex so that a more detailed examination of the rates can be made. It will be observed that while for all causes Scotland has the highest rates its position varies a great deal from cause to cause. The Scottish ratio is more favourable for syphilis and its sequelæ, acute poliomyelitis, influenza and nephritis and nephrosis. The Scottish ratio shows a fairly marked excess in the case of tuberculosis, malignant neoplasms, diabetes, anæmias, vascular lesions of central nervous system, diseases of digestive system and accidents in the home.

Chapter 7. Infant Mortality

Numbers

7.1 There were 2,673 deaths of infants aged under one year, of whom 1,542 were males and 1,131 females. The total number was 143 fewer than in 1959 and 110 below the average.

National-Rates

7.2 The infant mortality rate was 26.4 per 1,000 live births, the lowest ever recorded in Scotland; in 1959 it was 28.4. The rate for males was 29.7 and 22.9 for females, compared with 32.0 and 24.5 respectively in 1959.

7.3 Up to 1915 the rate never fell below 100, but in the 1920's and 1930's it started to decline and by 1939 it was 68.5. Since 1947, when the rate was 55.8

there has been a downward trend. (Table 2).

Seasonal incidence

7.4 The highest monthly infant mortality rate was 31 in January and the lowest was 22 in July. In 1959 the highest rate was recorded in February, 36, and the lowest in September, 23. (Table 63). The rate in the first quarter was 29, in the second 26, in the third 24 and 27 in the fourth quarter. Quarterly rates are given in Table 3 for the years 1951 to 1960.

Area-rates

7.5 In the cities and large burghs the rates were 28, while it was 24 in the small burghs and 25 in the landward areas.

7.6 As landward areas are by no means uniformly rural in character, rates have been calculated for the four regions which comprise the landward area. These are given in table 7.1 along with those for cities and large burghs and small burghs for the years 1950, 1959 and 1960.

Table 7.1 Infant Mortality Rates in Local Authority Districts and Regional Landward Divisions, 1950, 1959, 1960

	1960	1959	1950	1	1960	1959	1950

Other large burghs	. 25	26	37	West Central† .	26	31	40
Small burghs .	. 24	25	37	Southern	23	23	33
Landward .	. 25	27	37				

^{*}East Central Division: Counties of Fife, Clackmannan, Stirling, West Lothian, Midlothian, East Lothian and the City of Dundee.

†WEST CENTRAL DIVISION: Counties of Lanark, Dunbarton, Renfrew and Ayr.

The counties lying to the north and west of the Central Industrial Belt are referred to as the Northern Division; those lying to the south and east of it as the Southern Division.

7.7 In individual cities and large burghs the rate ranged from 37 in Hamilton to 9 in Inverness and in the counties (exclusive of cities and large burghs) it ranged from 41 in Argyll to 8 in Caithness (Table 4). Infant mortality rates for individual small burghs and landward areas are given in Tables 5 and 6.

International-rates

7.8 So that comparison may be made with the experience in Scotland, a selection of infant mortality rates of other countries is given in Table 7.2

Table 7.2 Infant Mortality per 1,000 Births in Various Countries—1960

^{*}Excluding Maoris.

Legitimacy and illegitimacy

7.9 Among legitimate children the infant mortality rate was 26, being 27 in the cities, 27 in the large burghs and 25 in the counties; these compare with figures of 28, 30, 29 and 26 respectively in 1959.

7.10 The rate among illegitimate children was appreciably higher at 41, being 44 in the cities, 53 in the large burghs and 32 in the counties. The 1959 rates were 38, 42, 35 and 33 respectively. (Table 31).

Age and sex

7.11 The number of deaths and death-rates per 1,000 live births by age and sex in days, weeks and months during the first year of life are given in Table 32. It will be seen that more infants died in the first day of life than in the remaining days of the first week, and that 69 per cent. of the children who died before reaching one year of age did not survive the first week. The neonatal rate was 18·2, 20·4 for males and 15·9 for females, but in the second month it fell to 3·4, 3·9 for males and 2·8 for females, and the combined rate for the last three months was only 0·9 for persons, males and females. Infant mortality rates, by age and sex, for the period 1922-1960, are given in table 7.3

Table 7.3 Infant Mortality per 1,000 Births by Age and Sex in Scotland, 1922-1960

1956-60	31.5	18.9	3.0	4.1	3.4	2.2	24.1	13.6	2.4	3.2	2.8	2.2

Prior to 1950 the numbers and rates relate to 1 week and under 1 month and 1 month and under 3 months.

Neonatal and postneonatal mortality—trends

7.12 The neonatal and postneonatal mortality rates are given in quinquennial averages from 1911 to 1960 and by single years from 1951 in Table 7.4. From 1936 legitimate and illegitimate rates are shown separately.

Table 7.4 Neonatal and Postneonatal Mortality per 1,000 Births—1911-1960

1951–55	20.7	20.1	32.4	12.2	11.9	18.5
1956-60	19.0	18.6	27.8	8.9	8.8	11.2
1951	22.3	21.8	31.6	15.1	14.7	22.2
1952	21.7	21.1	33.2	13.5	13.1	20.9
1953	19.3	18.8	30.3	11.5	11.2	17.0
1954	20.6	19.9	35.0	10.4	10.1	15.6
1955	19.7	19.2	31.8	10.6	10.4	16.3
1956	19.1	18∙7	27.0	9.5	9.4	13.3
1957	19.6	19.2	29.9	9.0	8.9	10.5
1958	18.7	18.4	27.0	9.0	9.0	8.8
1959	19.4	19-1	26.4	9.0	8.9	11.4
1960	18.2	17.8	28.8	8.1	8.0	11.8

^{*}Prior to 1950 the rates relate to under 1 month and between 1 month and 1 year.

- 7.13 In the 1911-1915 quinquennium the postneonatal rate was very much higher than the neonatal rate but by 1941-1945 the rates were almost equal. Since then the difference between the two rates has widened in favour of the postneonatal rate and in recent years it has been less than half of the neonatal rate.
- 7.14 The neonatal rate was 18·2 in 1960 compared with 19·4 in 1959. The postneonatal rate remained steady at 9·0 in the years 1957-1959 but fell to 8·1 in 1960.

Neonatal and postneonatal mortality—legitimacy

7.15 Since 1942 the postneonatal death rate for legitimate births has been lower than the neonatal rate but it was not until 1948 that the postneonatal rate similarly fell in the case of illegitimate births. Recently the excess of illegitimate rates over the legitimate has been more pronounced for the neonatal rate.

Neonatal and postneonatal mortality—social class

7.16 A series of neonatal and postneonatal rates, by social class, are given in Table 7.5 for 1939 and each year from 1946 to 1960; comparable stillbirth rates are given in Table 8.17. In each social class the postneonatal rate has shown a greater improvement than the neonatal rate.

Table 7.5 Infant Mortality Rates according to Social Class, 1939 and 1946 to 1960

1956	11-1	13.6	19·1	22.2	22-2	5.8	5.7	8.4	10.9	16.5	
1957	14.1	16.4	19.5	20.1	22.2	4.3	5.3	7.9	11.6	14.3	
1958	15.0	14.2	18-4	18.4	24.2	2.1	5.7	8-4	10.6	14.0	
1959	13.7	16.4	18.8	20.5	24.0	2.3	6.0	8.2	10.2	15.4	
1960	13.0	17-2	17-1	20.7	21.0	2.7,	4.3	7.2	10.2	12.8	

7.17 In Table 7.6 infant, neonatal and postneonatal mortality rates, by social class, are given for Scotland, the cities, large burghs and counties in 1960; comparable stillbirth rates are given in Table 8.16. Social class has a much more marked effect on postneonatal than on the neonatal mortality. The same is true not only for Scotland as a whole but also for the area rates and this merely confirms the experience of recent years. Compared with 1959 there were decreases in the total infant mortality rate in each social class, except class IV.

Causes of death, by age and sex

7.18 Malformations and diseases of early infancy (I.S.C. Nos. 750-776) are reviewed in Chapter 6, paras. 47-50, and an analysis is given in Table 29 of causes of death in 1960 among children under one year, by age and sex. The most important causes were asphyxia and atelectasis, 529; congenital malformations, 505; prematurity (unqualified) 330; birth injuries, 304; and pneumonia (excluding newborn) 242. Compared with 1959 there were decreases in deaths from congenital malformations (56); pneumonia, all forms (48) and asphyxia and atelectasis, (33) and increases from birth injuries, (20), bronchitis, (11) and meningitis, (9).

Causes of deaths, trends

7.19 To facilitate the examination of trends in infant mortality a new table (Table 29A) has been prepared giving for the period 1950-1960, deaths by cause and sex, with the relative rates per 1,000 live births.

7.20 Since 1950 deaths from tuberculosis have almost disappeared and mortality from other infectious diseases, notably whooping cough, have been greatly

reduced. There has been substantial improvement in mortality from all forms of pneumonia, diarrhœa, other infantile diseases (principally prematurity) and convulsions. The congenital malformation rate has fluctuated but today stands lower than it was in 1950. After showing improvement in the early and mid 1950's, the birth injuries rate has increased, although still below what it was in 1950. Asphyxia and atelectasis alone among the principal causes has increased steadily since 1950; the rate in 1960 was, however, lower than in 1958 and 1959.

Causes of death, by month of registration

Deaths of children under one year are classified by cause and month of registration in Table 30. Reference has already been made in paragraph 7.4 to the seasonal incidence of infant mortality.

Causes of death, by social class

7.22 The causes of death by social class in the first year of life among legitimate children, are given in Table 26.

As one might expect the social class differences between the rates for neonatal causes (I.S.C. Nos. 750-776) and postneonatal causes follow the trends already referred to in paragraph 7.18. The 1960 rates per 10,000 live births for social classes I and II, III, IV and V were:

	I & II	III	IV & V
Neonatal causes (750-776)	162	183	218
Other causes (remainder)	35	60	93

7.24 Table 7.7 gives the experience for the years 1950-1960 of infant mortality by cause and social class. The rates have been calculated on three threeyear periods and one two-year period to provide more stable rates.

Table 7.7 Infant Mortality per 10,000 Live Births by Cause in Social Class

*Diarrhœa only in 1952-1953.

7.25 During the period 1950-1960 the greatest improvement in the total

infant mortality was in classes IV and V followed closely by class III.

7.26 In 1959-60 the relative excess of classes IV and V over classes I and II was greatest in pneumonia, diarrhea and suffocation and least in birth injuries and other infantile diseases. The greatest contributions to the absolute difference in the two rates were made by pneumonia, asphyxia and atelectasis and congenital malformations which jointly contributed more than half of the excess.

Chapter 8. Stillbirths

Numbers and rates

8.1 The total number of stillbirths registered during the year 1960 was 2,252 and with 101,292 live births registered during the same period these stillbirths were equivalent to a rate of 21·7 per 1,000 total births, live and still, the lowest ever recorded in Scotland. Apart from slight increases in the rates for 1945 and 1954 there has been a continuous reduction in the rate since 1939, the first year in which stillbirths were registered in Scotland (Table 2).

Area death-rates

8.2 For local authority aggregates the stillbirth-rate was 22 in the cities, 22 in the large burghs, 20 in the small burghs and 22 in the landward areas. The corresponding rates in 1959 were 24, 21, 21 and 22. As in previous years the rates for individual large burghs and counties show wide variations, and in some, owing to the comparatively small numbers involved, the annual rates are not very stable. Among cities and large burghs the highest rate for the year was 37 in Port Glasgow and the lowest 10 in Arbroath. In the counties the highest rate was 33 in Wigtown and the lowest 5 in Kincardine. There were no stillbirths in the County of Peebles (Table 4).

8.3 In Table 8.1 will be found the stillbirth-rates aggregated for the four geographical divisions of Scotland. The rate ranged from 23.0 in West Central to 18.5 in Northern.

Table 8.1 Stillbirth-Rates per 1,000 Births (Live and Still) by Divisions, 1960

Divisions*	Total	Counties of Cities and Large Burghs	Counties (excluding Counties of Cities and Large Burghs)
Northern .	18.5	20.2	17.8
East Central .	21.2	19.5	23.3
West Central .	23.0	23.6	21.5
Southern .	22-9	18.8	23.5
SCOTLAND	21.7	22:2	21.2

^{*}The East Central Division consists of the Counties of Fife, Clackmannan, Stirling, West Lothian, Midlothian and East Lothian, with the City of Dundee; the West Central Division consists of the Counties of Lanark, Dunbarton, Renfrew and Ayr; the Northern Division includes all counties north and west of these two divisions, and the Southern Division all counties south and east.

8.4 In Table 8.2 stillbirths-rates are given for Scotland, cities and large burghs, counties exclusive of large burghs, and the four geographical divisions for the years 1939 to 1960. Generally there has been a steady improvement each year in all the areas, although the rate in the Southern Division has tended to fluctuate. Among the geographical divisions the Northern has shown the most improvement, the rate now being 53 per cent. below that of 1939, the East Central coming next at 50 per cent. below the 1939 rate.

Stillbirth and neonatal death-rates

8.5 In 1960 the death-rate among stillbirths and children aged under four weeks was 39.6 per 1,000 total births, live and still, compared with 77.3 in 1939 and the average of 42.2. The rates for individual years since the beginning of stillbirth registration are given in Table 8.3. Stillbirth and neonatal-rates have declined since 1939, the stillbirth rate rather more regularly than the neonatal-rate but each is now not much more than half of the rate registered 21 years ago.

Table 8.3 Stillbirth and Neonatal Death-Rates per 1,000 Total Births (Live and Still)—1939-1960

^{*} These neonatal-rates, being based on total births, do not quite correspond with those based on live births only, which will be found elsewhere in this Report.

Age of mother and number of previous children

- 8.6 Table 19 shows legitimate and illegitimate stillbirths classified according to age of mother, and legitimate stillbirths according to the number of children already born to the mother.
- 8.7 Among legitimate births the rate was 21.3 per 1,000 total births, this rate being at its lowest when the mother was aged 20-29 years and rising thereafter with increasing age of the mother.
- 8.8 For every age-group, except 40-44, the illegitimate stillbirth-rates were higher than the corresponding legitimate rates. They are based on small numbers, but exhibit a similar general trend as the legitimate rates, viz:—a fairly steady increase with increasing age of mother.
- 8.9 Stillbirth-rates by age of mother are given in Table 8.4 for the years 1939 to 1960. Throughout the twenty-two years under review it will be seen that, generally, the younger the mother, the less risk there is of stillbirth. Among those aged under 45 a comparison of the 1939 and 1960 rates shows that there has been a steady improvement in each age-group and that most improvement has taken place in age-groups 35-39, 25-29 and 30-34 which are now 51, 49 and 48 per cent. below the 1939 rates.

1960	21.7	21.3	31.8	23	18	18	24	31	49	79

8.10 Table 8.5 has been prepared from the distribution of stillbirths by age and parity shown in Table 19 in order to contrast first births with all subsequent births at different ages of mother. This shows that except for age-group 35-39 the rate for primiparous exceeds the rate for multiparous births.

8.11 Among multiparous births themselves, the relative frequency of still-birth varies widely, being least in the case of a second birth and thereafter generally increasing with increase in the number of previous children born to the mother.

Table 8.5 Legitimate Stillbirths per 1,000 Legitimate Births (Live and Still), 1960

	CI II C		Multip	aræ (one	or more	previous	births)			
Age of Mother	Children of all	Primiparæ (first births)	Number of Previous Births

ALL AGES	21	22	21	15	19	23	36			

8.12 To examine separately the influence of parity and of age of mother, Table 8.6 has been compiled. The parity groups are aggregated to obtain more stable rates. For each parity group the stillbirth rate tends to increase with increasing age of mother and when the experience of mothers of similar ages is examined, it is found that as a rule the rate increases with increasing number of previous children, an important exception being for first births in which are

found higher rates than for 1-3 previous children. This is further borne out by Table 8.7 where birth order rates are given for each year from 1939 to 1960. In 1960 the stillbirth rate for first births was above the average rate for each maternal age-group, except for those aged 35-39.

Table 8.6 Legitimate Stillbirths per 1,000 Legitimate Births (Live and Still), (Age of Mother and Number of Previous Children), 1960

Illegitimate stillbirths

8.13 Of the 2,252 stillbirths 145 or 6.4 per cent. were illegitimate, this being an appreciably greater proportion than among living births, 4.4 per cent. of which were illegitimate. The corresponding general stillbirth rate among illegitimate children was 31.8 compared with the rate of 21.3 for legitimate infants; this better experience is apparent in every age-group. It will be seen from Table 8.4 that while the 1960 general legitimate rate is now 49 per cent. below that of 1939, the illegitimate rate has only improved by 33 per cent. in the same period.

8.14 The percentage of stillbirths and live births which were illegitimate are compared for individual years in Table 8.8.

Multiple births

8.15 In 1960 there were 101,292 live births and 2,252 stillbirths which resulted in 102,275 confinements. These confinements are analysed according to whether live or still and plurality in Table 2.2 (see paras. 2.6-8). Among single births the stillbirth-rate was 22 per 1,000 but among twin births the rate was 45.

CAUSES OF DEATH

Certification

8.16 In 2,232 of the 2,252 stillbirths registered, the cause of death was certified by a medical practitioner, and 15 by a certified midwife. There were 2 cases of registration following receipt from the Procurator Fiscal of a Schedule of Result of Precognition, and three cases in which it was necessary for a statutory declaration to be made by the informant that the child was not born alive. The percentages certified by a medical practitioner and by a midwife were $99 \cdot 1$ and $0 \cdot 7$ respectively. In 1959 the corresponding figures were $99 \cdot 1$ and $0 \cdot 6$ and in 1939 $94 \cdot 4$ and $5 \cdot 3$ respectively.

Principal causes

- 8.17 Analyses of the causes of stillbirth, by age of mother and sex of child, are given in Table 21; stillbirths, by cause and sex, are given in Table 21A for years 1950 to 1960. The principal causes of death among stillbirths in 1960 were congenital malformations of fœtus, 526; other placental and cord conditions, 404; ill-defined causes, 366; antepartum hæmorrhage, 360; difficult labour, 234; and toxæmias of pregnancy, 186.
- 8.18 In acute and chronic diseases of mother there were 68 deaths of which the chief individual components were diseases of the circulatory system, 29, and diabetes, 15.
- 8.19 Deaths from toxemias of which 90 per cent. were from eclampsia and pre-eclampsia, numbered 186 compared with 188 in 1959.
 - 8.20 Fætal deaths attributed to difficulties at birth numbered 234, of which

65 were certified as birth injury. Of the remainder 63 were due to malposition of fœtus and 55 to disproportion.

8.21 Antepartum hæmorrhage leading to stillbirth is preponderantly accidental hæmorrhage, a little under six per cent. of this whole group being ascribed to placenta prævia.

8.22 Among stillbirths ascribed to congenital defect, the most important individual defects were anencephalus, 305, and hydrocephalus, 118, these

accounting for four-fifths of the whole group.

8.23 Placental and cord conditions (apart from antepartum hæmorrhage) accounted for a total of 404 deaths; 86 were due to prolapse of cord, 105 to torsion of cord and 95 to placental infarct.

8.24 Ill-defined and unknown causes constitute 16 per cent. of stillbirths (15 per cent. in 1959) and compare favourably with the figure of 33 per cent. at the outset of registration of stillbirths in 1939.

Death-rates

8.25 For the principal cause groups the rates per 1,000 births by age of mother are shown in Table 8.9. Generally the rates in the first age-group (under 20 years) are high, fall to a minimum at 20-24 or 25-29 and thereafter rise steadily with advance of maternal age.

Trends

8.26 Table 8.10 has been compiled to show rates for cause of death groups during the period 1939 to 1960. Toxaemias and antepartum hæmorrhage have fallen fairly regularly in the twenty-two years and are now respectively 53 per cent. and 36 per cent. below the 1939 rates. Other placental and cord conditions, fœtal defects and acute and chronic disease in mother have not shown any comparable improvement. Difficult labour and ill-defined or unknown causes have shown the greatest improvement being now 69 per cent. and 76 per cent. respectively below the 1939 rates. The apparent improvement in the ill-defined or unknown causes rates should be looked at somewhat cautiously, as should the increase in the other defined causes rate from 0.7 in 1939 to 1.0 in 1960. These are partly due to an improvement in certification and from further inquiries to the certifiers.

1960	22	0.7	1.8	3.5	3.9	5.1	2.3	1.0	3.5

Rates for years 1939 to 1949 conform as far as is possible to the 1948 and 1955 International Classification of Causes of Stillbirth (Y30-Y39)

Sex ratio and rates

8.27 The ratio of male to female stillbirths for groups of causes is given in Table 8.11.

Table 8.11 Causes of Stillbirths—Ratio of males to females, 1959 and 1960

Acute and chronic disea	osa in ma	other		1960 1·00	1959 1·41	
	ase in me	other	•			
Toxæmias .				1.21	1.00	
Antepartum hæmorrhag	ge .			1.43	1.40	
Other placental and cor	d condit	ions		1.15	1.05	
Fœtal defects .				0.57	0.55	
Difficult labour .				1.34	1.33	
Other defined causes				 1.08	1.04	
Ill-defined or unknown	causes		4	1.14	1.02	
ALL CAUSES				1.03	0.99	

- 8.28 In 1960 the ratio of male: female stillbirths was 1.03, the corresponding live birth ratio being 1.05. There has been a downward trend from a peak of 1.27 in 1941 and it fell below unity for the first time in 1959 when the ratio was 0.99.
- 8.29 An examination of the trend of the stillbirth-rate in each sex over the period since 1939 shows that the excess of the male rate over the female gradually decreased until in 1956 the female rate was greater than the male rate and has remained so.
- 8.30 Table 8.12 has been drawn up to show how the sex rates by cause group have changed between 1939-41 and 1958-60. The total male rate has improved by 45 per cent. as against the female 34 per cent. In individual cause groups, the improvement in the male and female rates has been relatively and absolutely greatest for difficult labour and toxæmias.

Table 8.12 Stillbirth-rates, by Sex and Cause, 1941-43 and 1958-60

	All causes	Acute and chronic diseases in mother	Toxæ- mias	Ante- partum hæmor- rhage	Other placental and cord conditions	Fœtal defects	Difficult labour	Other defined causes	III- defined or unknown causes

Females 1941-43 1958-60	35 23	1·1 0·6	3·4 1·9	4·3 3·1	4·1 3·9	7·9 6·8	7·1 2·0	0·8 1·1	6·7 3·5

Causes by parity

8.31 Table 8.13 shows the stillbirth rates for broad cause groups for all married mothers and separately among primiparous and multiparous births. The heavier general rate among primiparous births is chiefly attributable to toxemias and feetal defects. The rates among them are more favourable than in the multiparous for antepartum haemorrhage, and other defined causes.

Table 8.13 Stillbirths-rates per 1,000 Births (Live and Still) among Married Mothers, 1960

Acute and chronic disease in mother Toxæmias Antepartum hæmorrhage Other placental and cord conditions	All married mothers 0.6 1.7 3.4 3.9	Primiparæ 0.6 2.6 2.9 3.6	Multiparæ 0.6 1.2 3.8 4.0

	3·4	3.5	1·5
	21·3	22.4	3·4

Illegitimate stillbirths by cause

8.32 The 145 illegitimate stillbirths are analysed by cause in Table 22.

Seasonal incidence

8.33 Stillbirths are classified by cause of death and month of registration in Table 23. The monthly rate for all causes fluctuates between 18 in October and 27 in January. Quarterly rates of causes of death are given in Table 8.14.

Table 8.14 Quarterly Stillbirth-rates per 1,000 Births (Live and Still), by cause of death, 1960

YEAR	22	0.7	1.8	3.5	3.9	5.1	2.3	1.0	3.5

Cause and place of occurrence

8.34 Table 23A shows the stillbirths by cause subdivided by place of occur-

rence. Of the total 2,252 stillbirths, 1,918 or 85·2 per cent. occurred in institutions. The highest proportions are as expected found for acute, serious illness peculiar to pregnancy such as eclampsia and pre-eclampsia, and accidental hæmorrhage; for general illness such as diabetes and heart disease; and for anencephalus, erythroblastosis and asphyxia. The lower proportions of institutional stillbirths, proportions actually lower than the average for all deliveries, are found for malposition of fœtus, placental infarct, torsion of cord, premature birth (cause not stated) and unknown causes. These figures naturally afford no information on the relative safety to the fœtus of domiciliary or institutional birth. Initial selection on such grounds as parity, general health of mother, previous obstetrical history, social factors and personal preference, together with the later, perhaps more important selection on the advent of illness during pregnancy or of obstetrical or other accidents in pregnancy and labour preclude any inference on these lines on the basis of such data as those in this Table.

In local authority areas

8.35 In Table 24 the stillbirths in each local authority area in Scotland are shown subdivided according to the full list of causes in use since 1950. Live births for these areas are given in Table 47.

SOCIAL CLASS

Causes

8.36 These are shown in Table 25 and the trend in social class cause rates may be seen from Table 8.15 which covers the 1950-1960 period in three three-year periods and one two-year period.

Table 8.15 Legitimate Stillbirths per 10,000 Births (Live and Still) by Cause of Death and Social Class, 1950-1960

Cause of Death	19	50–195	2	19	953-19	55	19	956-19	58	1959–1960

ALL CAUSES	216	254	295	188	236	289	195	220	271	154	211	249

8.37 In 1959-60 the relative excess of classes IV and V over classes I and II was greatest in antepartum hæmorrhage, fætal defects and difficult labour. These three causes accounted for sixty per cent. of the absolute difference between the two class groups.

Area rates

8.38 Social class rates for Scotland and the aggregate of cities, large burghs and counties are given in Table 8.16 for 1960. Comparable rates for neonatal, postneonatal and infant mortality are given in Table 7.6.

Table 8.16 Stillbirths in the Cities, Large Burghs and Counties according to Social Class, 1960

TOTAL	44,546	965	21.2

Trends

8.39 Rates are given in Table 8.17 for the years 1939 and 1946 to 1960. It will be seen that although improvement is apparent in each class, the disparity between the extremes of social class was greater in 1960 than it was in 1939. Comparable neonatal and postneonatal rates are given in Table 7.5.

Table 8.17 Stillbirth-rates according to Social Class, 1939 and 1946 to 1960

Chapter 9. Perinatal Mortality

Definition

9.1 Perinatal mortality is usually taken to include stillbirths and deaths of infants in the first week of life. To help research workers in this field additional data are given for deaths in the second, third and fourth weeks of life.

Numbers and rates

9.2 In 1960 there were 3,855 perinatal deaths, of which 2,252 were stillbirths and 1,603 deaths of children in the first week of life. The rate was 37·2 per 1,000 total births, live and still, compared with 38·4 in 1959 and 43·0 in 1950.

Area-rates

9.3 The geographical distribution of stillbirths together with neonatal deaths and the corresponding rates for stillbirths, neonatal deaths and the two groups combined is given in Table 18. The combined rate in the cities and large burghs ranged from 59 in Port Glasgow to 18 in Arbroath and in the counties from 60 in Wigtown to 10 in Peebles.

Age of mother and birth order

- 9.4 For the first time the data about mother's age and number of previous children, obtained under the Population Statistics Acts of 1938 and 1960 at the registration of births, have been related to deaths of children under four weeks. Social class analyses are given in Tables 28A and 28B of these particulars for deaths under one week and deaths under four weeks.
- 9.5 Perinatal mortality and rates, by age of mother, birth order and social class, are given in Table 9.1.

Causes of death

- 9.6 Deaths of infants under four weeks have again been classified to the Stillbirth Cause List and the results are given in Table 9.2. The experience of this year shows, as in 1958 and 1959, that fully 95 per cent. of deaths under one week can be satisfactorily classified to a stillbirth rubric.
- 9.7 Stillbirths show a marked relative excess in diseases and conditions of pregnancy and childbirth, difficult labour and placental and cord conditions and in congenital malformations to a lesser degree. Prematurity, birth injury and asphyxia and atelectasis are relatively more important among deaths under one week.

Chapter 10. Life Tables

10.1 An abridged life table is given in Table 10.1 and shows the further expectation of life at different stages of life, based on the mortality experience of 1960. At each age point the expectation of life is the average future life a person of that age would have if the 1960 mortality rates were to operate throughout the lifetime.

10.2 Table 10.2 shows how the expectation of life has increased at different

ages during the past century.

10.3 It will be seen that since the period 1861-1870 the expectation of life at birth has increased by 26·1 years for males and by 28·0 years for females. The greatest improvement has taken place since the beginning of the century. In the thirty years from 1861-1870 to 1891-1900 the improvement in males was only 4·4 years and in females 3·5 years. From 1891-1900 to 1930-1932 the span had lengthened by 11·3 years for males and 12·1 years for females. Since 1930-32 it has increased further by 10·4 years and 12·4 years respectively.

10.4 In 1861-1870 if the child survived the first year of life, the expectation of life rose from 40·3 years at age 0 to 45·6 at age 1 for males and from 43·9 to 47·5 for females. Adding in the year elapsed since birth, the gain was 6·3 and 4·6 years for males and females respectively. By 1960 the improvement in child

mortality had reduced these handicaps to 2·1 and 1·7 years respectively.

10.5 At age 15 the expectation of life has increased for males by about 12 years (from roughly 42 to 54 years) since 1861-70. At succeeding ages there is a consistent increase in expectation right up till the end of the life span. The actual amount of improvement, however, as might be expected, decreases progressively with increase of age until at age 65 the average change is less than one year.

10.6 The expectation of life for females is uniformly greater than for males of the same age and the increase since 1861-70 is slightly greater. At age 15 it increased by 15 years (from 44 to 59 years) and at age 65 the average change is

about two and a half years.

85 (839	4.26	1,806	4.19

This abridged life table is constructed from the estimated population in 1960 and the total deaths registered in that year.

The column headed lx shows the numbers who would survive to exact age x of 10,000 born who were subject throughout their lives to the death probabilities indicated by the 1960 death records. Column \mathring{e}_x is the "expectation of life", that is the average future lifetime which would be lived by a person aged exactly x, if likewise subject to these death probabilities.

Chapter 11. Registration Service

Re-registration of Births

11.1 The Registrar-General may authorise the re-registration of certain births under the provisions of the Registration of Births, etc. (Scotland) Amendment Act, 1934. This Act which became operative on the 1st January, 1935, allows for the re-registration of the births of persons born illegitimate who have been legitimated by the subsequent marriage of their parents and also of persons the entry of whose birth is affected by any matter contained in the Register of Corrected Entries respecting status or paternity.

11.2 The number of re-registrations authorised in each year since 1935 are given in table 11.1.

Table 11.1 Re-registration of Births, 1935-1960

Adopted Children Register

11.3 The Adoption of Children (Scotland) Act, 1930, which came into operation on 1st October, 1930, provides for the legal adoption of children in Scotland by Order of the Court, and for the registration of such adoptions in an Adopted Children Register kept at the General Registry Office, Edinburgh. Various amending Acts followed, and the enactments relating to the adoption of children were consolidated by the Adoption Act, 1958. The Adopted Children Register is open for search and extract purposes under the same conditions as are the Registers of Births, Deaths and Marriages, and an extract from the Adopted Children Register is evidence of adoption, and also of the date of birth of the child if it is recorded in the relative entry.

11.4 The number of adoptions recorded in each year since 1930 are given in Table 11.2.

Table 11.2 Number of Adoptions, 1930-1960

Registers in General Registry Office

11.5 These consist in the main of duplicate copies of the registers of births, deaths and marriages maintained by the local registrars. The public are entitled to make searches in the alphabetical indexes and to have extracts made from the registers on the payment of prescribed fees. The pre-1855 Church of Scotland registers of births, baptisms, proclamations of banns, etc., are also kept in the General Registry Office and extracts from these may also be obtained. The earlier census records are also open for search or extract.

11.6 The number of searches and extracts made in the General Registry Office and the fees received therefor are given in Table 11.3 for the years 1937

to 1960.

11.7 There were 13,728 official searches made in 1960 and of this number 11,602 related to claims for contributory, non-contributory and service pensions, 1,943 were in connection with investigations made by government departments and 183 related to claims for family allowances.

ADDITIONAL STATISTICS RELATING TO MARRIAGES REGISTERED IN SCOTLAND DURING THE YEAR 1959

IV.1 A preliminary statement relating to marriages registered in Scotland during the year 1959 was incorporated in the Hundred and Fifth Annual Report, but as full details were not available at the time when the report was prepared the statement was necessarily restricted. It is now supplemented by this detailed report on these marriages, which includes figures according to the type of marriage, the kind of marriage preliminaries (banns, notice or sheriff's licence), the church of celebration, and the conjugal condition and ages of those marrying.

Number of marriages

IV.2 In the Hundred and Fifth Annual Report it was stated that the number of marriages registered in Scotland in 1959 was 40,448, but after complete examination of the registers the corrected number is found to be 40,442. This is 744 fewer than in 1958 but is much above the average of 38,000 in the years 1934-38. In the post-war years 1946-50 the average was 43,200.

IV.3 The following Table IV.1 shows the annual number of marriages from 1951 and the estimated total population available for marriage. It will be seen that since 1951 the number of unmarried males over 15 has fallen by 9 per cent. and women by 7 per cent.

Table IV.1 Number of marriages and marriage rates, 1951 to 1959

	Number of	(Single, Widowe	etal Population ed and Divorced) and over	Rate per 1,000		Total Unmarried ged 15 and over

Marriage-rates

IV.4 The marriages in 1959 represent a rate of 7.79 per 1,000 population as

against 7.97 in 1958.

IV.5 Table IV.1 also shows the number of marriages related to the estimated total unmarried population aged 15 and over, males and females separately. It will be seen that over the period, these rates show effective increases of 8 and 6 per cent. respectively.

Ecclesiastical, civil and irregular marriages

IV.6 Of the 40,442 marriages registered, 33,190 or 82.07 per cent. were solemnised by a minister of religion after proclamation of banns, publication of notice or sheriff's licence, 7,250 or 17.93 per cent. were civil marriages under the

Act of 1939, and 2 or 0.00 per cent. were irregular marriages registered on the authority of decree of declarator granted in the court of session. Percentages in 1958 were 81.79, 18.21 and 0.01 respectively. (Table 49).

Method of publication

IV.7 Of the 33,190 ecclesiastical marriages (i.e. those with a religious ceremony) 71.5 per cent. were solemnised after proclamation of banns, 24.8 per cent. after publication of notice, 3.4 per cent. after proclamation of banns for one party and publication of notice for the other, while 0.4 per cent. were after sheriff's licence under the special provisions of the Act of 1939. In the cities and large burghs these four percentages were respectively 65.1, 31.2, 3.3 and 0.4 while in the counties they were 80.1, 16.2, 3.4 and 0.3.

IV.8 Table IV.2 shows the frequency of banns or of publication of notice in the case of marriages solemnised according to the forms of each of the principal churches. Proclamation of banns was the most usual preliminary in the Church of Scotland (94·0 per cent.), in the United Free Church (71·7 per cent.), and in the Congregational Church (71·1 per cent.). On the other hand 92·6 per cent. of Roman Catholic marriages and 100·0 per cent. of Jewish marriages were preceded by publication of notice.

IV.9 Of the 7,250 civil marriages registered 6,989 were preceded by publication of notice at the office of the registrar, while 261 were after sheriff's licence (Tables 49 and 50).

Church of celebration

IV.10 Of the 33,190 ecclesiastical marriages those solemnised according to the forms of the Church of Scotland numbered 22,773 or 68.6 per cent. (0.2 per cent. higher than last year), and those according to the forms of the Roman Catholic Church 6,785 or 20.4 per cent. (the same percentage as last year). (Tables IV.3 and 49).

IV.11 The local distribution according to ecclesiastical forms, and the numbers and proportion of non-ecclesiastical marriages, are set out in Table 51. Church of Scotland marriages constituted 56·3 per cent. of all marriages in Scotland, the proportion being 46·7 in the cities, 50·1 in the large burghs and 69·8 in the counties. Roman Catholic marriages made up 16·8 per cent. of all Scottish marriages, the percentage being 19·2 in the cities 20·2 in the large burghs and 12·4 in the counties.

Conjugal conditions of those marrying

IV.12 Of the 40,442 males marrying during the year, 37,667 or 93·1 per cent. were bachelors, 1,628 or 4·0 per cent. were widowers and 1,147 or 2·8 per cent. had been divorced. Of the females, 38,015 or 94·0 per cent. were spinsters, 1,226 or 3·0 per cent. were widows, and 1,201 or 3·0 per cent. had been divorced. Table IV.4 shows the marriages registered during 1959 arranged according to the conjugal condition of the contracting parties (Tables 52, 54A, 54B).

Table IV.4 Conjugal conditions of contracting parties, 1959

	Spinsters	Widows	Divorced Women	All Women
Bachelors .	36,388	489	790	37,667
Widowers .	837	599	192	1,628
Divorced men	790	138	219	1,147
All men .	38,015	1,226	1,201	40,442

IV.13 The Table IV.5 shows the civil condition of those marrying as compared with previous years. From about 1880 there has been a gradual decline in the percentage of widowed persons of both sexes remarrying. For males the percentage fell from 12·0 in 1871-1880 to 3·9 in 1958 and for females the percentage declined from 6·3 to 2·8 during the same period. In 1959, however, both sexes show a slight increase compared with the previous year.

^{*—}Previous to 1933 classified as Bachelors and Spinsters respectively.

IV.14 It will be noted that the percentage of widowers remarrying has always been higher than that of widows.

IV.15 The trend of divorce since 1932 and some detail regarding marriage of divorced persons is tabulated below.

Table IV.6. Marriage of Divorced Persons, 1932-1959

^{*}Including nullities.

Ages of those marrying

IV.16 The average age of all men marrying in 1959 was 27.4 and of all women 24.7, the same as in 1958. The following table shows the broad trend from 1861-1941 and yearly since 1951. Between 1861 and 1951 the variation ranged about one year but since 1952 there has been a progressive decrease in average age, evidence of the recent trend to younger marriages.

Table IV.7. Average age at Marriage—1861-1959

Year	Males	Females
1861	28.7	25.5
1901	28.7	26.1
1941	29.1	26.1
1951	28.6	25.7
1952	28.7	25.7
1953	28.5	25.6
1954	28.3	25.4
1955	28.0	25.2
1956	27.7	24.9
1957	27.5	24.8
1958	27.4	24.7
1959	27.4	24.7

IV.17 The average ages arranged according to the conjugal condition of those marrying during 1959 are set forth in Table IV.8 (Tables 55 to 59B).

Table IV.8. Average age at Marriage according to conjugal conditions

	Spinsters	Widows	Divorced Women	All Women
Average ages of	25.5	41.1	22.2	25.9
Bachelors marrying .	25.5	41.1	33.2	
Widowers marrying .	50.7	58.0	51.6	53.5
Divorced men marrying .	36.8	46.0	41.3	38.8
All men marrying .	26.3	49.9	37.6	27-4
	Bachelors	Widowers	Divorced Men	All Men
Average ages of				
Spinsters marrying .	23.0	40.8	30.1	23.6
Widows marrying . •	42.0	53.5	44.8	47.9
Divorced women marrying	33.6	43.9	37.2	35.9
All women marrying .	23.5	45.9	33.2	24.7

IV.18 These do not show any marked difference compared with 1958.

IV.19 Table IV.9 shows in age-groups the number of persons married in 1938 and in each year from 1948 to 1959. During the intervening years a considerable alteration has taken place in the age of those marrying. The number under 25 has increased since 1938 by no less than 95 per cent. in the case of males and 51 per cent. in that of females. In age groups 25-44 the proportion has fallen considerably but at ages 45 and over more marriages now take place, especially among females where the percentage is 37 above that of 1938. Compared with 1958 the numbers of both males and females show a decrease in the age group under 21.

Table IV.9. Age at Marriage 1938, and 1948-1959

	Year		All Ages	Under 21	21-24	25-29	30–34	35-44	45 and over

IV.20 The youngest bridegrooms of the year were 36 bachelors aged 16 who all married spinsters and 192 aged 17 of whom 191 married spinsters and one who married a divorced woman. The youngest brides were 490 spinsters aged 16. Of these 489 married bachelors and one married a divorced man. There were 1,423 brides aged 17 all spinsters, of whom 1,416 married bachelors, 3 married widowers and 4 married divorced men. It will thus be seen that the great bulk of those who have married under the age of 21 were 18 or over.

IV.21 The oldest man who married during the year was a widower aged 85 who married a spinster aged 71 years. The oldest bride was a widow aged 80 years who married a widower aged 75 years.

IV.22 Table IV.10 shows the percentage of persons who married by agegroups for the years 1938, 1948 and 1959. This comparative table indicates that both as regards males and females there are now more marriages in the younger age-groups than immediately prior to the war. In 1938 the largest percentage of males who married were in the ages 25-29 whereas to-day the largest percentage is in the age-group 21-24. The number of males marrying under 21 years has also greatly increased and the percentage is roughly three times that of 1938. The highest percentage of females now marrying is in the agegroup 21-24 years. In 1938 this group also showed the highest percentage, being slightly in excess of those at ages 25-29 but in 1959 the percentage in the latter group was less than half of those between 21-24. As in the case of males there is now a higher percentage of females marrying under 21 years and they constitute just over a third of all marriages.

Table IV.10. Percentage Married in Each Age Group 1938, 1949, 1959

	Year		All Ages	Under 21	21-24	25-29	30-34	35-44	45 and over
Males	1938 1949 1959		100 100 100	4·26 5·56 13·06	23·74 32·39 39·35	36·91 33·22 26·44	18·64 12·59 8·99	10·86 10·28 6·43	5·59 5·96 5·74
FEMALES	1938 1949 1959	:	100 100 100	18·44 23·50 34·25	30·81 35·68 37·08	28·22 22·51 14·71	12·41 7·56 5·37	7·28 7·34 4·85	2·84 3·40 3·73

IV.23 The foregoing paragraphs and tables demonstrate the recent change in marriage age from the late 20's and the 30's to the earlier age groups. This has had its effect in reducing the average age at marriage, an effect slightly offset by the increases at ages over 45 with their heavier weighting.

Appendix V

PARLIAMENTARY AND LOCAL GOVERNMENT ELECTORS, 1960

V.1 Tables 60 and 61 summarise certain electoral statistics which are related to the Register of Electors compiled under the provisions of the Representation of the People Acts and published on the 15th February, 1960 with reference to the qualifying date, the 10th October, 1959.

V.2 The figures contained in Table 60 have been compiled from returns furnished by the electoral registration officers of the several areas. The table shows the total number of parliamentary electors in each parliamentary constituency in Scotland; separate figures are given for the civilian residents and service voters. There was one by-election held on the basis of the February 1960 register.

V.3 The figures contained in Table 61, which have been compiled from returns furnished by Town Clerks, show the number of local government electors in the counties, burghs, landward areas and districts (district council areas) respectively. Additional figures show to what extent seats on Councils were contested and what proportion of the electorate voted at the local elections held in 1960.

NOTE-

Appendix VII — Registration of Births etc.

This is now Chapter 11—Registration Service

Appendix VIII INHABITED HOUSES

VIII.1 Table 62 gives the numbers, as entered in the Valuation Rolls, of inhabited houses in each city, large burgh, small burgh and landward area in Scotland for the year 1939 and for each year from 1956 to 1960.

VIII.2 The table has been compiled from statements received from Town Clerks and County Clerks.

Appendix IX—Perinatal Deaths classified to Stillbirth Causes

This is now Chapter 9

Appendix X

CENTRAL CLYDESIDE CONURBATION

X.1 The constitution of the area of the Central Clydeside Conurbation is as follows:—

Dunbarton County (part of) Clydebank Burgh Bearsden Burgh Kirkintilloch Burgh Milngavie Burgh

Lanark County (part of) Glasgow City Airdrie Burgh Coatbridge Burgh Hamilton Burgh Motherwell and Wishaw Burgh Rutherglen Burgh Lanark Fifth District of County Lanark Sixth District of County Lanark Eighth District of County Lanark Ninth District of County

Renfrew County (part of)
Barrhead Burgh
Johnstone Burgh
Paisley Burgh
Renfrew Burgh
Renfrew First District
of County
Renfrew Second District
of County

X.2 The vital statistics in the area of the Conurbation in the calendar year of 1960 are given in Table X.I. The births and deaths are corrected, where necessary, to relate to the area of usual residence.

Table X.1 Vital Statistics of Central Clydeside Conurbation, 1960

	Registered	Corrected for Transfer	Rate per 1,000 of estimated population
Births Deaths	38,484 20,153	39,131 20,969	21·7 11·6
Deaths under 1 year		1,198	30.6 per 1,000 live births
Marriages	14,929		8-3
Stillbirths	936	957	23.9 per
			1,000 total
			(live and still)

- X.3 The population of Central Clydeside at 30th June, 1960 was estimated to be 1,802,466, more than a third of the population of Scotland. The birth-rate of 21·7 was 3·4 higher than that of the rest of Scotland whereas the general death-rate of 11·6 was 0·4 lower. The infant mortality rate of 30·6 was 6·9 higher and the stillbirth rate 23·9 was 2·5 higher than in the rest of Scotland.
- X.4 The excess of the birth-rate over the death-rate in the Conurbation area was 8.9 per 1,000 of the population against 5.4 in the remainder of Scotland. The excess of births over deaths in Scotland was 39,528, those in the Conurbation accounting for no less than 18,165.
- X.5 The male death-rate in the Conurbation area was 1,274 per 100,000 of the population compared with 1,259 in the rest of Scotland. The female rates were 1,060 and 1,142 respectively. The rates, by sex, from the principal groups of causes of death are given in Table X.2.

Table X.2 Certain Specified Causes of Death in the Central Clydeside Conurbation and the rest of Scotland with their Corersponding Rates per 100.000 Population-1960

Appendix XI

METEOROLOGICAL NOTES

REPORT ON THE WEATHER IN SCOTLAND FOR THE YEAR ENDED 31st DECEMBER, 1960

XI.1 Under the heading of "Meteorological Notes" a descriptive account of the weather is given in the "Quarterly Returns" published by the authority of the Registrar-General, and the notes are accompanied by statistics for some of the Principal Towns.

XI.2 The present report for the year 1960, is of general character as to text, and to it are appended tables summarising the statistics of the various stations (pages 77-85).

General.

XI.3 The outstanding features of the year are indicated in the course of the report. The more notable are:—

- (a) Heavy snowfalls in mid January and mid February.
- (b) Mildness of April, May and June.
- (c) Coolness of remainder of the summer.
- (d) High frequency of thunderstorms.

Gales

XI.4 Winds reached gale force at exposed places on 128 days, which was slightly fewer than the last two years. On April 13th-14th the following high gust speeds were recorded: 89 m.p.h. at Stornoway, 86 m.p.h. at Tiree, 85 m.p.h. at Lerwick and 83 m.p.h. at Dounreay. Other noteworthy gusts were 81 m.p.h. at Lerwick on February 17th and 85 m.p.h. at Benbecula on December 26th.

Temperatures

XI.5 The mean temperature for the year, based on records from the main centres of population was 48.0°F, 0.5° above the average. Both January and February had a mild start and finish, but periods of severe frost and snow blizzards occurred in the middle, with the result that the mean monthly temperature was below the average. March too, started mild but after the first week there were frequent frosts. April, May and June were all mild and in fact it was the warmest May since 1896. June continued the fine spell but there was an unsettled period in the middle of the month. It was the only month in which temperatures exceeded 80°F. Both July and August were unsettled, cool, and at times thundery. September too, had changeable weather with only moderate temperature but there was an improvement towards the end of the month, with long sunny periods. October was mild in most parts and in November temperature was about average but there were short cold periods. December was cold with a good deal of frost and fog.

The highest daily reading of temperature during the year was 85°F at Grantown-on-Spey on June 24th. The same station also recorded the lowest reading,—8°F (40 degrees of frost) on February 18th. The lowest reading on the ground was also—8°F at Cannich on February 18th, but for a number of Highland stations records were incomplete owing to ground thermometers being buried in snow.

Rainfall

XI.6 Amount of precipitation in 1960 exceeded the average in Northeast and Southern Districts but in Central Lowlands, North-western districts and in the Northern Islands it was less than the average. The North-west corner of Sutherland had only about 70% of its normal rainfall but around Kincardineshire amounts were about 140% of average.

In January, rainfall was above average in Eastern Districts of the mainland and less than average in the West. In West Perthshire, parts of Argyll and most of Shetland amounts were less than half the average. In February the driest area was the North-west and the wettest parts were in the Northeast and in the Galloway district. March was a dry month in most places, the main exception being an area in Fife, South Angus and Central Perthshire. The first half of April was wet in many places but the remainder was mainly dry. Rainfall was below average in May in many districts but in Central Perthshire it was more than the normal amount. June amounts of rain were above average in most areas North-west of the Caledonian Canal (including the Islands), but in the south, with one or two exceptions, it was less than average. The northern half of the country was the driest area in July and the West (including the Islands) the driest in August. Heavy rainstorms on August 25th-26th with consequent flooding raised totals to twice the average in places adjacent to the inner Moray Firth and severe flooding was also reported from the Galloway district around the same period. September rainfall was below average in most places, the exceptions being South Aberdeenshire, Kincardineshire and North Angus and some extreme South-west coastal districts. A preponderance of Easterly winds made October a dull wet month in the East but it was comparatively dry in the West. At Fort William (Glasdrum) the rain was only 13% of its average amount. November was a wet month over the southern half of the country but the North was more favoured, with amounts less than average. In December amounts were above average in most Northwest, West and Southern districts but elsewhere it was mainly below normal.

Amongst heavy falls of rain in 24 hours were 3.58 inches at Dallas House, 3.46 inches at Kellas House and 3.45 inches at Auchindoune (all in Morayshire) on August 25th; 3.56 inches at Torridon House (Wester Ross) on June 9th; 3.56 inches at Kingairloch on February 2nd; 3.53 inches at Glen Tanar (Aberdeenshire) on January 19th and 3.42 inches at Lochranza on October 2nd.

Snowfall

XI.7 Heavy falls of snow occurred on January 13th and again on 18th-19th, causing villages and farms in Northern Counties to be isolated. Trains were trapped in deep drifts and several lives were lost. Snowstorms were again widespread during the period February 10th to 22nd and the hazards of the January storms were repeated and the South-west and West districts were also badly affected. Moderate amounts of snow fell in East Scotland during the second week in March and there were scattered slight falls in April. Light

snowfalls were reported here and there in November and during December there were further falls with some roads blocked around the 27th.

Thunder

XI.8 Thunder was reported from various places on 123 days. This number is well above average and is in fact the greatest frequency since 1934 at least. August with reports on 25 days, July (19), June (18) and December (15) had the most storms.

Sunshine

XI.9 Records of bright sunshine for the year were above average in North and West Scotland but slightly below average in the East. Prestwick had an excess over average of over 350 hours and many other places in the West were 150 hours or more above their normal amounts.

The highest totals were: Prestwick (1,628) hours, Tiree (1,588), Auchincruive (1,575), Campbeltown (1,576), Stranraer (1,563) and Castle Douglas (1,559).

January was rather dull in the East but amounts of sunshine were above average in West and North. February was a sunny month in most places and at Dundee, Arbroath, Greenock and Perth, the amounts recorded were the highest for February since records began at these places. March was very dull in the East, and the North-west was the only district with more than average amounts. April continued the deficiency in most places but May was sunny, except in some places in the South and South-west. Records were good in June except in some Eastern districts. Most South and Central areas had a dull July but the Outer Isles and the North Mainland districts had more than normal amounts of sun. During August the Islands and the Western Seaboard were again the sunniest places and in September and October the most favoured places were again in the West and in the latter month Eastern districts were particularly dull and Craibstone near Aberdeen had its lowest October total since 1924. The November and December totals were above average in many places.

Fog

XI.10 Morning fog was reported from one place or another on 200 days, about the same as 1959. Around February 6th it was dense in places, particularly around Glasgow and transport services by land, sea and air were interrupted. Fog which occurred on November 19th was bad near Edinburgh and Turnhouse Airport was closed to traffic and prolonged periods of fog during the second and third weeks of December increased traffic problems which were already formidable on account of ice.

Aurora

XI.11 Aurora Borealis was observed on 142 nights. This frequency is above average but decidedly less than the occurrences of the past two years. The months with the highest number of occurrences were October (21), November (18) and April and December (17).

(For statistical tables see pages 77-85.)

[‡] Mean civilian population for year

Table 1A. Estimated Population, Total, De Facto, and Civilian by sex and age, as at 30th June, 1960.

Total population comprises the civilian population, all members of H.M. Forces of Scottish domicile and Merchant Navy at home and abroad, but excludes Forces stationed in Scotland who are not of Scottish

domicile.

De facto population comprises the population, of all types, actually in Scotland.

Civilian population comprises all civilians but excludes Merchant Navy at home and abroad.

Table 1C. Estimated Total Population mid-1960, projected to mid-1980 by sex and age.

Basis—Mid-1960 estimate of Total Population (including Scottish Armed Forces and Merchant Seamen at home and abroad but excluding Forces stationed in Scotland who are not of Scottish domicile.)

Assumptions-

Mortality—Steady decline of death rates over the period to about one-half of the rates experienced in the years 1955-59 at ages under 45; and progressively less improvement at ages over 45.

Fertility—Births averaging 100,000 in first 5 years, 105,000 in next 10 years, thereafter rising to about 110,000 in 1980. Male to female ratio 1.06.

Migration—Annual net loss of 20,000 (10,000 males and 10,000 females).

Note.—For comparability with previous years deaths from pneumonia from 1950 onwards, include International Rubric 763.

* Deaths from Pneumonia and from Bronchitis when associated with Influenza are included in the numbers given. For 1941 and subsequent years those from Bronchitis include "Influenza with other respiratory complications" (481a, page 182).

† Including Dysentery but excluding ulcerative colitis. From 1950 and subsequent years it excludes "Chronic entertits"

* Deaths for year 1950 are classified to the Sixth Revision but the averages for 1946-50 are calculated on the Fifth Revision.

Corresponding details for individual years prior to 1921 will be found in the Reports for 1930 and previous years.

previous years.

^{*}All cases of "pentothal" and "sodium pentothal" where they are so described are listed under "thiopentone."

Notes: (1) Deaths registered during 1950-57 have been classified in accordance with the Sixth Revision of the International Statistical Classification of Causes of Death (1948) and those from 1958 with the Seventh Revision (1955) In a number of instances fourth digit subdivisions are also given: International Classification subdivisions by numbers (0, 1, 2, etc.) Scottish subdivisions by letters (a, b, c, etc.).

(2) A separate line has not been devoted to a number of those rubrics to which very few deaths are assigned each year and the practice has been to amalgamate them, for example, 004-008. In order to have the record complete details of any deaths regis-

tered from these causes are shown on page 205, figures in roman type indicating the number of male deaths while those in italics the female deaths. The ages are also given for those which occurred during 1960. Thus "008, Tuberculosis, unspecified site, 1955, I; 1956 1", denotes 1 female death in 1955 and 1 male death in 1956.

(3) In accordance with the Sixth and Seventh Revisions of the International Statistical Classification of Causes of Death, rubrics 306, 308, 649 and 775 have been omitted from this table as they are not applicable to primary death classification.

Table 42-continued

- 004, Primary tuberculosis complex with symptoms, 1951, 1; 1952, 1, 3; 1958, 2. 005, Tracheobronchial glandular tuberculosis with symptoms, 1950, 2; 1951, 2; 1958,1; 1960, 1 (30).
- Radiological evidence suggestive of active respiratory tuberculosis not classifiable elsewhere

- 007, Other respiratory tuberculosis, 1950, 1, *I*; 1952, 2; 1955, 1; 1956, 1. 008, Tuberculosis, unspecified site, 1950, *I*; 1955, *I*; 1956, 1; 1959 1. 030, Acute or unspecified gonorrhœa, —. 031 Chronic gonococcal infection of genito-urinary system, 1950, 1; 1954, *I*; 1959 1.

- o32. Gonococcal infection of joint, —.

 033. Gonococcal infection of eye, —.

 034. Gonococcal infection of other sites, 1958, *I*.

 035. Late effects of gonococcal infection, 1950, *I*; 1957, 1; 1960, 1 (55).

- 036. Chancroid, 1950, 1.

 Jumphogranuloma venereum, —.

 038. Granuloma inguinale, venereal, —.

 039. Other and unspecified venereal diseases, 1956, 1.

 100. Louse-borne epidemic typhus, —.

 101. Flea-borne endemic typhus (murine), —.

 102. Brill's disease, not specified as louse- or flea-borne, 1956, 1.

 103. Tabardillo (Mexican typhus), not specified as louse- or flea-borne, —.

 104. Tick-borne typhus, —.

 105. Mite-borne typhus, —.

 106. Volhynian fever (trench fever), —.

 107. Typhus, unspecified, —.

 108. Other rickettsjal diseases, 1950. 1: 1952. 1: 1960. 1 (45).

- 108, Other rickettsial diseases, 1950, 1; 1952, 1; 1960, 1 (45).
- 110, Vivax malaria (benign tertian), -111, Malariæ malaria (quartan), -.
- 112, Falciparum malaria (malignant tertian), 1950, 1; 1951, 1; 1953, 1; 1959, 1. 113, Ovale malaria,
- 114, Mixed malarial infections, -

- 114, Mixed malarial infections, —.
 115, Blackwater fever, —,
 116, Other and unspecified forms of malaria, 1956, 1; 1958, 1
 117, Recurrent induced malaria, —,
 120, Leishmaniasis, —,
 121, Trypanosomiasis, —,
 122, Other protozoal diseases, 1950, 1.
 123. Schistosomiasis —
 124. Other trematode infestation, —,
 125, Hydatid disease, 1950, 1; 1952, 1; 1955, 1; 1957 1; 1958, 1; 1959, 1; 1960, 1 (65),
 126, Other cestode infestation, 1950, 1; 1952, 1; 1960, 1 (75).
- 127, Filariasis. 128, Trichiniasis,

- 129 Ankylostomiasis, 1952, 1.
 130, Infestation with worms of other, mixed and unspecified type, —.

- 130, hiestation with worms of other, mixed and unspecified type, —.
 131, Dermatophytosis, 1959, 1, 1.
 132, Actinomycosis, 1951, 1; 1954, 1; 1955, 1; 1956, 1.
 133, Coccidioidomycosis, —.
 134, Other fungus infections, 1951, 2; 1952, 3, 1; 1953 3; 1954, 1, 1; 1955, 1; 1956, 1, 1; 1958, 2.
 1959, 3, 1.
- Scabies,
- 136, Pediculosis,

- 136, Pediculosis, —.
 137, Other arthropod infestation, —.
 138, Other infective and parasitic diseases, 1950, 1; 1951, 2, 2; 1952, 3; 1953, 2; 1954, 2, 1; 1960, 7 (50, 55, 55, 55, 55, 65).
 310, Anxiety reaction without mention of somatic symptoms, 1952, 1, 1; 1953, 1; 1954, 1; 1958, 2, 1.
 311, Hysterical reaction without mention of anxiety reaction, 1950, 1 1951, 1, 2 1952, 1, 3 1953, 2; 1954, 1, 1; 1955, 1, 5; 1956, 3; 1957, 2; 1958, 1; 1959, 2, 2; 1960, 3 (55, 55, 70).
 312, Phobic reaction, —.
 313, Obsessives compulsive reaction, 1957, 1

- 1933, 2; 1934, 1, 1; 1933, 1, 3; 1936, 3; 1937, 2; 1938, 1; 1939, 2, 2; 1900, 3 (35, 55, 70).

 312, Phobic reaction, —.

 313, Obsessive-compulsive reaction, 1957, 1.

 314, Neurotic-depressive reaction, 1953, 1.

 315, Psychoneurosis with somatic symptoms (somatization reaction) affecting circulatory system, 1950, 1.

 316, Psychoneurosis with somatic symptoms (somatization reaction) affecting digestive system, 1950, 1, 2; 1951, 1; 1955, 1, 1; 1956, 1, 1; 1957, 2, 1; 1959, 1, 317, Psychoneurosis with somatic symptoms (somatization reaction) affecting other systems, 1950, 1, 1 1955, 1 1956, 1; 1958, 1; 1959, 1; 1950, 1 (85).

 318, Psychoneurosic disorders, other, mixed and unspecified types, 1950, 1, 1; 1951, 2, 1; 1952, 1; 1955, 2; 1957, 5; 1960 1 (55); 1 (80).

 E990, Injury due to war operations by gas and chemicals, —.

 E991, Injury due to war operations by grenade and landmine, —.

 E992, Injury due to war operations by marine mine, depth charge and torpedo, —.

 E994, Injury due to war operations by explosion of artillery shell, —.

 E995, Injury due to war operations by explosion of undetermined origin, —.

 E997, Injury due to war operations by other and unspecified means, —.

 E998, Injury due to war operations by other and unspecified means, —.

 E999, Injury due to war operations by other and unspecified means, —.

 E999, Injury due to war operations by other and unspecified means, —.

 E999, Injury due to war operations by tother and unspecified means, —.

 E999, Injury due to war operations by other and unspecified means, —.

 E999, Injury due to war operations by other and unspecified means, —.

 E999, Injury due to war operations by other and unspecified means, —.

 E999, Injury due to war operations by other and unspecified means, —.

Note-Numbers in brackets denote age-groups.

^{*}The Free Church and the United Presbyterian Church were united on 31st October, 1900, under the name of the United Free Church. The Church of Scotland and the United Free Church were united on 2nd October, 1929, under the designation of "The Church of Scotland".
†By the Marriage (Scotland) Act, 1939, which came into operation on 1st July, 1940, Irregular Marriages by declaration were abolished and Civil Marriages were substituted. The Irregular Marriages shown in the last column for 1941 onwards were registered by Decree of Declarator of the Court of Session.
